# Outline

- ❖ Overview
- ❖ Structure
- ❖ Dynamics
- ❖ Future Prospects
- ❖ Conclusion/Recomendation

# Overview

- Main economic sector in Myanmar is agriculture in which rice is the most important commodity to supply growing population and obtain surplus of rice to be exported in order to have national income.
- In 2011/12, total multiple crops sown area was 55.56 million acres.
- The area planted to paddy was amounted to 18.76 million, 34 percent of total multiple crops sown area, followed by largest share of pulses and oil crops sow area were accounted for 10.91 and 9.01 million acres respectively.
- The country's population in 2009-2010 was estimated at **59.13** million with the annual growth rate of 1.29 percent.
- As for next decade, total population is estimated at **67.22** million in 2019-2020 based on 2009-2010 with current annual growth rate.
- To be supplied for growing population and surplus of rice are required for export.

## **RICE POLICY & LEGISLATION**

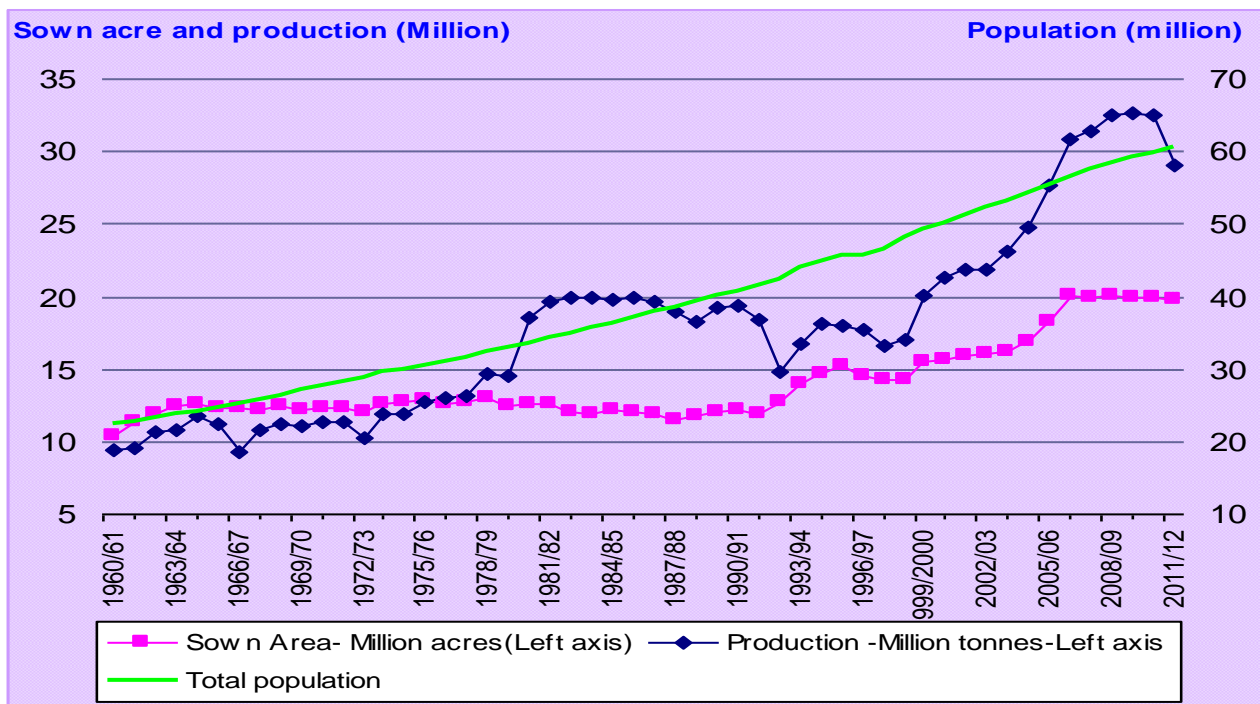

- **In 1988-89, centrally planned economic system ended and market oriented economic system was adopted by State.**
- **Pulses export by private sector was allowed in 1988, rice export remained under State control.**
- **In 2003, rice export by private sector allowed, MAPT rolled back involvement in rice industry.**
- **In 2011, export tax on private sector was reduced from 10% to 2%.**
  
- **Plant pest quarantine law(1990)**
- **Pesticide law (1993)**
- **Fertilizer law (2000)**
- **Seed law ( 2013)**
- **Farmland Law (2012)**
- **Virgin and Fallow Land Law (2012)**

# PADDY PRODUCTION IN MYANMAR

## (2011-2012)

Particular	Sown acre (Million acres)	Harvested acre (Million acres)	Yield per acre (Tonne/acre)	Paddy Production (Million tonnes)	% on total production
Monsoon paddy	16.13	16.07	1.50 (71.91 )*	24.1	83
Summer paddy	2.63	2.63	1.86(89.36)*	4.9	17
<b>Total</b>	<b>18.76</b>	<b>18.70</b>	<b>1.24 (74.36)*</b>	<b>29.0</b>	<b>100</b>

\* Basket per acre

## PADDY PRODUCTION (cont'd)

- In 1992/93, summer paddy (dry season paddy) was introduced in Myanmar with the provision of irrigation facilities in Lower and Central Myanmar.
- The country's rice utilization, export relied on monsoon paddy production before 1992/93.
- Since 1992/93 the country's rice utilization, export and stock relied on monsoon and summer paddy production.
- In Myanmar 83% of paddy is derived from monsoon paddy production and the remainder 17% is supplied from summer paddy production.

# SEASONAL PRODUCTION OF RICE IN MYANMAR

<b>4. Cost of production</b>	<b>Ks per acre</b>	<b>129,900</b>	<b>100</b>	<b>207,200</b>	
5. Paddy yield per acre	Basket per acre	60		85	
6. Paddy yield per acre	Tonne per acre	1.25		1.77	
7.Break-even price of paddy (4)/(5)	Kyats per basket	2,165		2,438	
8. Marketing cost of paddy to be sold at rice mill	Kyats per basket	250		250	
<b>9.Break-even cost of production and marketing</b>	<b>Kyatsper basket</b>	<b>2415</b>		<b>2688</b>	
8. Selling price at rice mill	Kyats per basket	3600		3550	
10. Net margin for farmers	Kyats per basket	1185		862	
11. Net margin per acre	Kyats per acre	71100		73270	
	USD *per acre	82.67		85.19	
12 . family labour ( cost of hired labour)		4,800		6,000	
13. farmer income ( 11) +(12)	Kyats per acre	75900		79270	
	USD per acre	88		92	

# STRUCTURE: RICE SUPPLY CHAIN IN MYANMAR

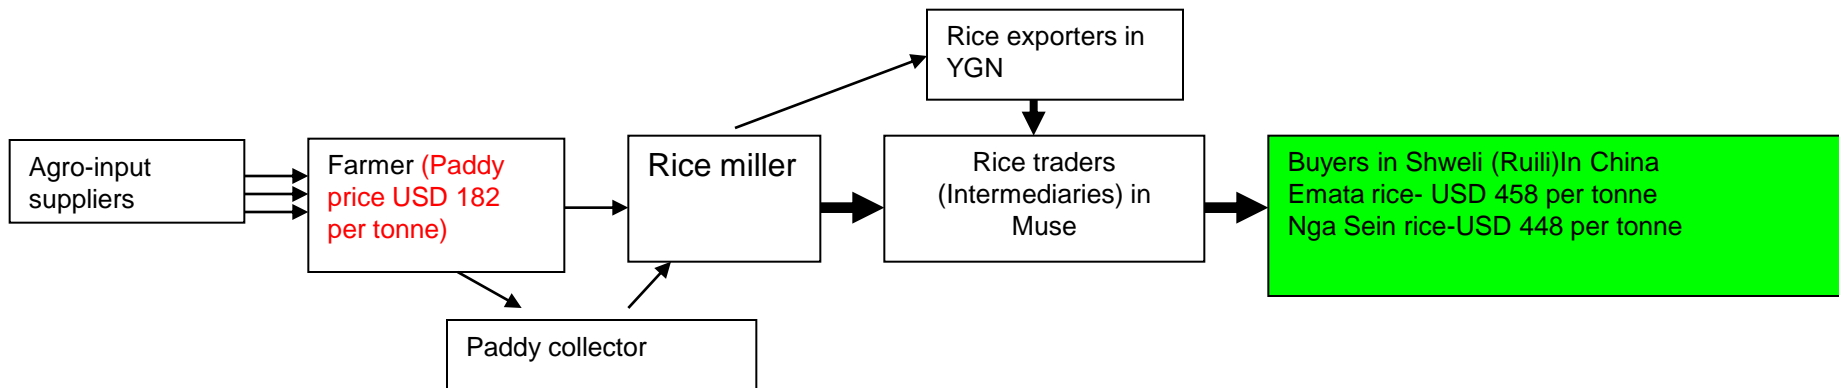

## A. SUPPLY CHAIN 1: International trade of rice (white rice, broken rice, and parboiled rice) f.o.b. YGN basis

Price varied from farmers to rice exporters  
(25% EMATA RICE EXPORT)

Paddy was sold at rice mills and Collectors purchased paddy and resold to rice millers. Milled rice in Ayeyarwady delta and Bago was shipped to Yangon. Rice exporters purchased in Rice Exchange Center in Yangon Bayint Naung Wholesale Market. Purchase rice 'prepared' to meet export quality specifications. Then it was delivered to Thilawa, YGN port.

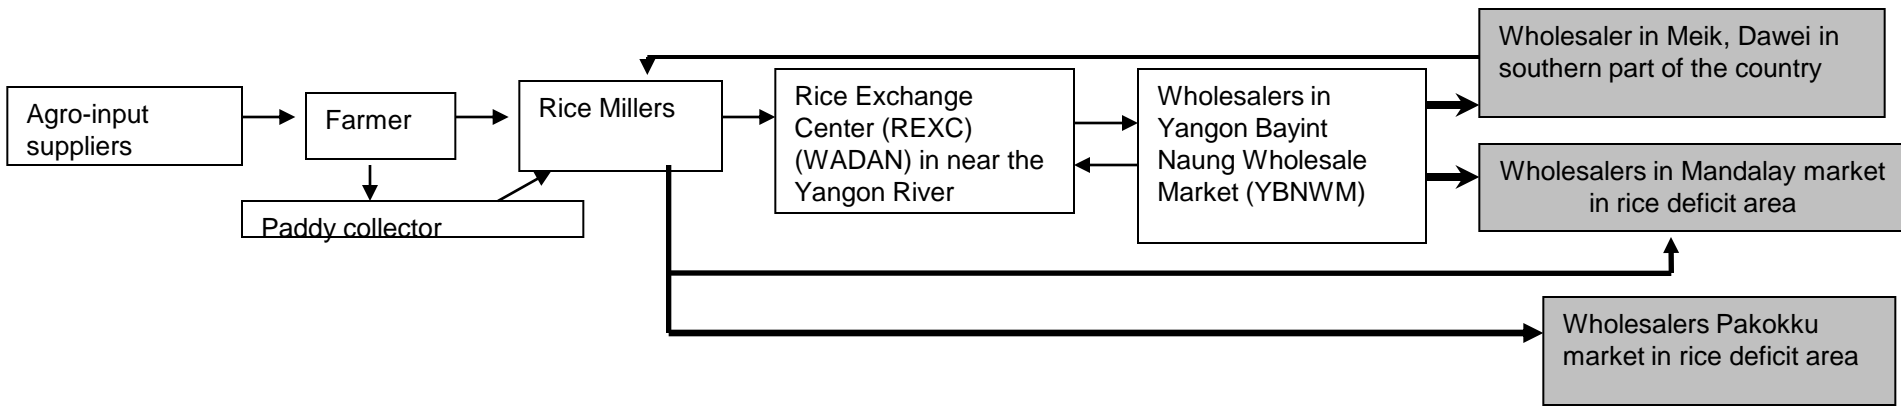

## B. Supply chain 2: rice traded through Border e.g. Shweli (Ruili) in China

Rice traded to China , Thailand, and Bangladesh				
Country	2011-2012		2012-2013 (up to November)	
	Export volume (Tonnes)	Export value(USD)	Export volume (Tonnes)	Export value (USD)
China	18950	7,091,150	19362	6,423,364
Thailand	-	-	31662	10,664,265
Bangladesh	28975	11,325,660	-	-

Source: Ministry of Commerce

### C. Supply chain 3: spatial arbitrage from rice surplus to rice deficit area

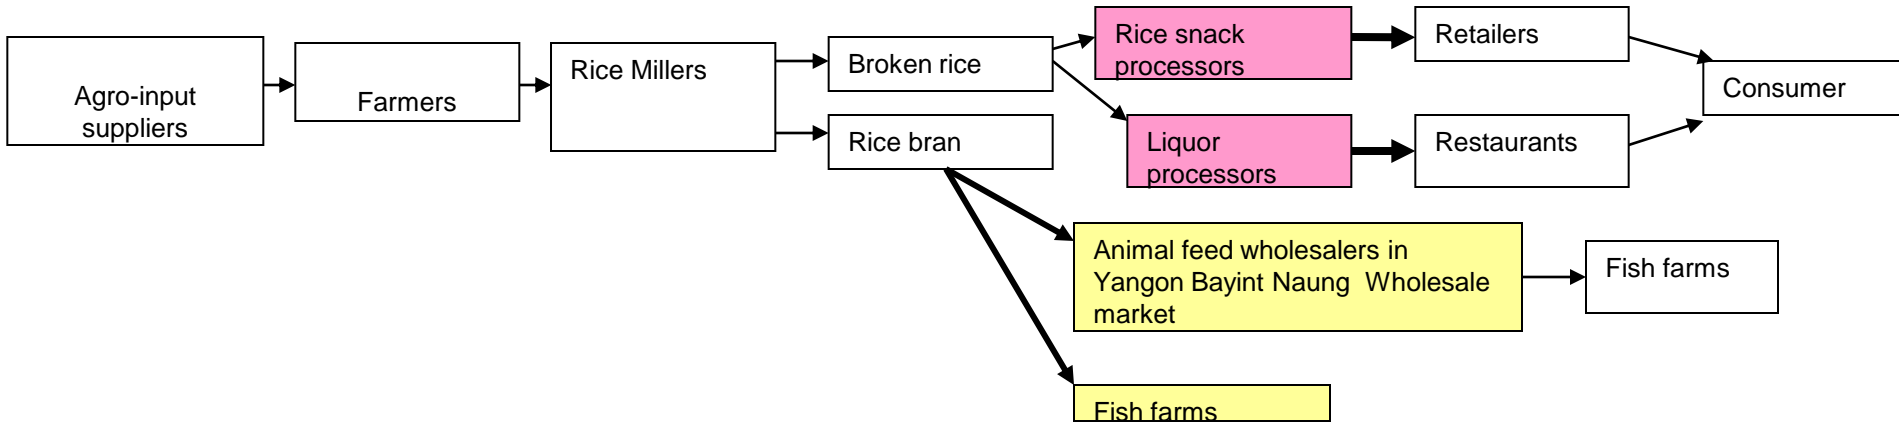

- Rice in Myaung Mya in Ayeyarwady is shipped to Pakokku Market in northern part of Magway.
- Rice in Shwebo is supplied to Pakokku market.
- Rice in Ayeyarwady is shipped to Yangon Bayint Naung Wholesale market (YBNWM).
- Rice in YBNWM is consigned to Myingyan and Mandalay Market where rice was shipped to Pyin-Oo-Lwin, Moegoke, and Muse.
- Pawsan rice in Shwebo is supplied to YBNWM.

**SPATIAL ARBITRAGE OF RICE FROM SURPLUS AREAS TO DEFICIT AREAS**

## D. Supply chain 4: by-products of broken rice and rice bran

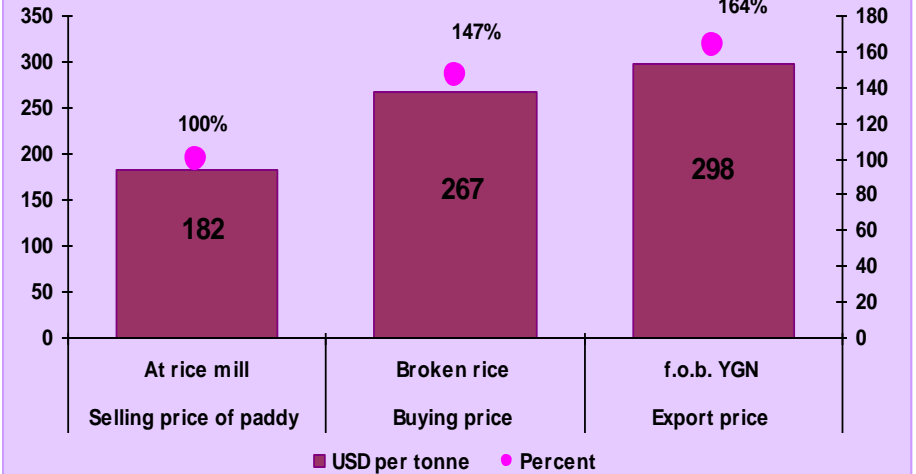

USD per tonne

USD per tonne

Zeera		800	800		400	400
Nga sein		700	700		350	350

2 kg of rice= 1 Pyi (volume basis),

16 Pyi =1 basket of rice used by traditional marketing unit of volume

# Weak Links in the Myanmar Rice Supply Chain

*(Strength of a chain is determined by the weakest link)*

## WEAK LINKS

**Weak link 1.** Input supplies need to be improved –especially seeds and fertilizers . Need PPP in certified seed production. Existing local urea production insufficient - need to invite FDI in this area, given Myanmar’s oil & Gas endowment. Agri-support services – research, extension, marketing, credit still weak.

**Weak link 2.** As to paddy quality, high broken faced by rice millers due to proper post harvest techniques. Similarly purity of paddy varieties were constraint for rice millers interviewed. Proper drying, milling and storage facilities are required. Rice bran oil and other end uses of rice products and by-products very limited.

**Weak link 3.** Inconsistent quality and supply for exports. Domestic price and supply volatility problematic – require proper rice stock pile doubling as buffer stock (MRF now started initiative – need to nurture). Border trade (legal and informal) not properly monitored and managed.

**Weak link 4.** Lack of quality, consistency and transparency in even basic data and information along the rice supply chain. Challenging for Policy makers and investors (especially FDI)

# Dynamics

- Transformation of supply chains - growing importance of mills as a fulcrum or pivot & P-P-P arrangements – Rice Specialization Companies, MAPCO
- Which of the separate supply chains (domestic surplus to deficit areas, exports through ports; exports through Border (especially to China); others - growing fastest and why?
- Packed and branded rice selling in local owned supermarkets/mini-markets, restaurants, some traditional markets
- Importance of time (temporal - single or double cropping areas - if single cropping, any initiative to plant other crops in off season..rice-based farming system, crop rotation as well as space - which areas more likely to have productivity increases (irrigated areas with multipurpose dams generating electricity to run mills and processing centres).

)

# Future Prospects

- Policy issues - strengthening the identified weak links in rice supply chain proper seed industry and coordinated reform and restructuring of rice industry
- Coordinated initiatives to export rice by varieties (as in domestic market) with emphasis on green food (low chemicals, traceable, certified safe, etc) rice
- More organized border trade – especially to China.

## **RECOMMENDATION**

- 1. Collaboration between private sector (especially MAPCO and Rice Specialization Companies) with MOAI and Ministry of Commerce to develop and manage Myanmar rice supply chain – from production of certified seeds, provision of mechanization services, post-harvest technology, etc – including promotion (‘branding’) of Myanmar rice.**
- 2. Rice export increasingly by variety, especially for higher grade rice (less percentage broken) – building on current efforts with Zeeyar, Sinthwelat, Inmayebaw, Theehatayin, 747 of 5%, 10% and 25% to Middle East, Europe, and Malaysia as well as Paw San to Singapore and Hong Kong – leveraging on the fact that sales of rice is already by variety in the domestic market.**

## **RECOMMENDATION (cont'd)**

- 3. Border trade with neighbor countries. Geographically, Myanmar is bordering five neighboring countries – Bangladesh, India, China, Lao PDR, and Thailand.**
- **Myanmar has inherent strategic geo-political and geo- commercial advantage within the context of Association of South East Asian Nations (ASEAN), Greater Mekong Sub region (GMS), Bay of Bengal Initiative for Multi sectorial and Economic Cooperation (BIMSTEC) and Ayeyarwady-Chaopraya-Mekong Economic Cooperation Strategy (ACMECS).**
  - **Need to focus on key border crossings that can also be used as spring-board to other countries next to our neighbours in view of the increasing interconnectivity all over continental Asia. This will open new markets over land via intermodal transportation systems integrating road, rail and waterways (rivers and lakes)**

## **RECOMMENDATION (cont'd)**

**4. Public-private partnership. MOAI and MOC need to work with MAPCO and other private entities to be quality inputs, including certified seeds; provision of effective agri-support services (transfer of technology, marketing); and other innovative developments along the rice supply chain. Concerted efforts should also be targeted at developing vibrant farmers organization.**

**5. Supermarket chain. Development of Supermarkets/mini-markets in Myanmar is expected to increase from the major cities to regional growth centers. Given the benefits as well as problems that accompanies the rise of supermarkets in other parts of Asia, and especially in CLMV countries, we should monitor their development as well as the realised benefits and adverse effects closely. This is especially so when foreign-owned or regional supermarkets chains take root in Myanmar.**

***Thank you!***

**Discussions are warmly welcome!!**
