Research upends theory that Vikings taught Inuit spinning

And the techniques researchers have developed to show that **ancient Dorset and Thule people knew how to spin yarn centuries before the Norse were thought to have taught them** could change the way archeologists think about Arctic history.

Arctic history is totally reversed, literally it's 180 degrees from what you've been taught or what is in the history books existing right now. Researchers were shocked to figure out that as early as 100 to 600 AD the Thule and Norse had already perfected yarn spinning from animals and also at extracting oil out of arctic animal hair for daily use.

Research upends theory that Vikings taught Inuit spinning

The origin of the yarn spun from animal hair and sinew had bedevilled Arctic scientists for generations. Most assumed it was a skill picked up from Viking colonists who sailed west from Greenland, establishing a community at L'Anse aux Meadows in Newfoundland about 1,000 years ago.

"They clustered into a period from about 100 AD to about 600-800 AD — roughly 1,000 years to 500 years before the Vikings ever showed up. (The Dorset) are manipulating the kinds of fibres you find in your environment at least as early as 100 BC."

When the Vikings voyaged up to Greenland, they were taught this skill by the local indigenous peoples living there, researchers had it completely reversed, the Vikings may have picked up a few tricks from the Thule.

Research upends theory that Vikings taught Inuit spinning

In fact, the Vikings may have picked up a few tricks from the Thule. It's not conclusive, but Hayeur Smith said there's some evidence to suggest Norse weavers learned how to use hair from bears and foxes, as well as from sheep and goats, from the people they referred to as Skraelings.

I really like older maps, so I'll wide this out for you. This is what circa 1700 AD maps look like of Greenland.

(BELOW) Taking a look at the spread of the Dorset the Thule / Norse from 900 AD onward to 1500 AD, there must have been some climatic change because you can see the dominance has switched from Dorset 900-1100 AD to Thule through 1300-1500 AD.

This old map is a keeper right here, monsters of the deep and the beliefs we used to have stated as fact when the Earth used to be flat, and our timelines the Vikings taught everybody else, well everything just reversed.

So where does this take us into the whole controversy of repeating cycles of time with Grand Solar Minimums on cycles affecting society and crop production globally.

If you like this type of analysis, take it on the go with Mini Ice Age Conversations Podcast, thirty minutes piecing together how the intensifying Eddy Grand Solar Minimum will affect your life over the next 5 years.
