

Is the World Starting to Repeat 1970's Style Winters & Summers?

[— ADAPT 2030 Video Link —](#)

Barrow Alaska, they've been telling you in the global warming debate Alaska is getting warmer and warmer. Well, at least not these next couple of weeks near freezing now, through August 27th these high temperatures of what 35-37 degrees F, then we go out into September.

Barrow, AK 10 Day Weather

12:16 am AKDT

 Print

DAY		DESCRIPTION	HIGH / LOW	PRECIP	WIND
TONIGHT AUG 18		Light Rain	--/43°	60%	SW 13 mph
SUN AUG 19		AM Showers	45°/37°	40%	WSW 13 mph
MON AUG 20		Cloudy	39°/32°	20%	E 18 mph
TUE AUG 21		Cloudy/Wind	35°/32°	20%	ENE 21 mph
WED AUG 22		Cloudy	35°/31°	10%	ENE 19 mph
THU AUG 23		Cloudy	35°/32°	20%	ENE 17 mph
FRI AUG 24		Cloudy	37°/33°	20%	ENE 13 mph
SAT AUG 25		Cloudy	38°/32°	10%	NE 8 mph
SUN AUG 26		Mostly Cloudy	38°/33°	20%	WNW 11 mph
MON AUG 27		Mostly Cloudy	37°/33°	0%	N 8 mph

Oh, a whopping 36 degree Fahrenheit high, break out the umbrellas it's beach weather in August !

SAT AUG 25		Cloudy	38°/32°	10%	NE 8 mph
SUN AUG 26		Mostly Cloudy	38°/33°	20%	WNW 11 mph
MON AUG 27		Mostly Cloudy	37°/33°	0%	N 8 mph
TUE AUG 28		Partly Cloudy	39°/34°	20%	WSW 12 mph
WED AUG 29		Showers	38°/34°	40%	W 7 mph
THU AUG 30		Rain/Snow Showers	37°/33°	40%	WNW 10 mph
FRI AUG 31		Mostly Cloudy	36°/32°	20%	N 8 mph
SAT SEP 1		Partly Cloudy	36°/32°	10%	WSW 8 mph

Over to Nullschool, anywhere it's blue you can see that's freezing or below, which is a large amount of the Arctic Circle and remember the melt season ends first weeks of September. Then we'll be back to gaining ice, and then the news will try to have to explain away why the Arctic is gaining ice the last couple of years, good luck with that narrative switch.

Over to snow in Georgia, Eastern Europe, and add to this rare earliest ever recorder snows in Japan with frost in August as well.

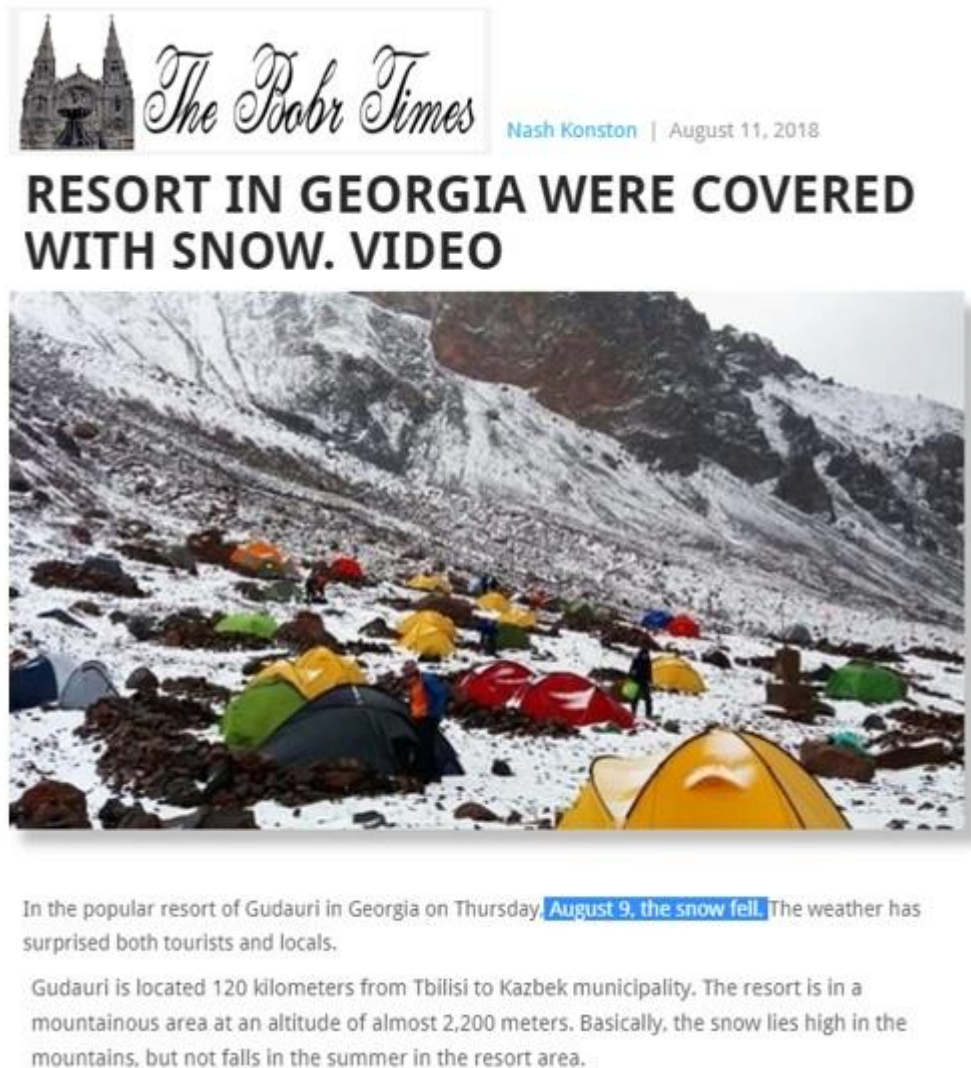

Now we have reports of snow in Georgia. Where is Georgia? Right on the Black Sea, sandwiched between Russia and Turkey.

That's the wide out, let's zoom in right where that red star is, the area where this is happening, it's in the mountain resort area at 2,200 meters.

Back on August 12th and 13th, you can see they had a couple inches of snow up there, extremely rare, and people are being caught out camping and not prepared for this cold weather.

You can see it's covering roofs and ground, it is several inches deep coming down.

As I always do when I'm in a website I just put the word "snow, cold, or record cold, record snow, or snowstorms" in the Search Bar to see what else they have in their news feeds.

NEWS

THE NETWORK WAS TOLD ABOUT THE ABNORMAL SNOW STORM IN IRAN

Nash Konston | August 2, 2018

During this storm in 1972, the snow level had reached eight feet. In Iran many people today do not know what a snow Blizzard, as here, by our

I found this summer snow event in Russia, I hadn't heard about that on July 21st, air temperatures around 3 degrees C with record snow, unusual snow.

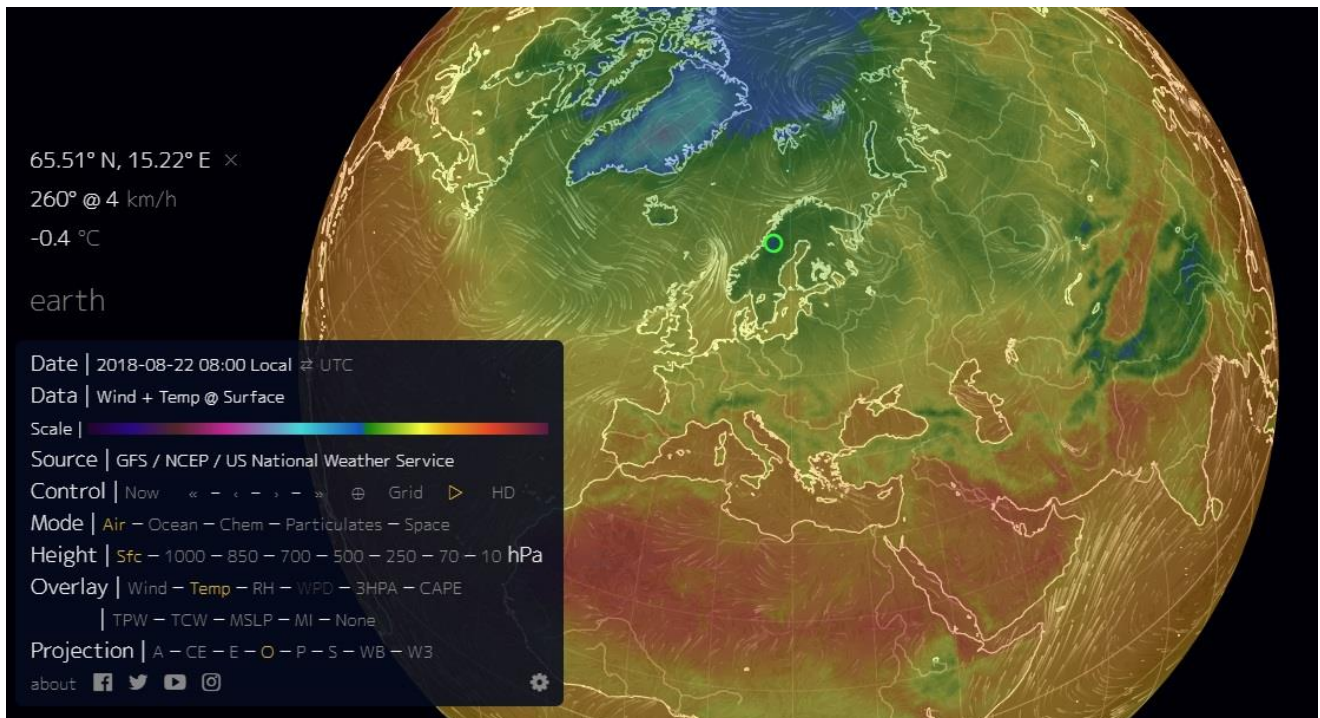

Where is this place? I looked it's up at 69 degrees north latitude, and if you follow that right around you're going to come to Norway where they were talking about the all-time record temperatures during this exact same event. So record heat over in Norway and Sweden, but somehow they missed the cold and record snow on the same latitude over in Russia during the same days.

**Location of
Norilsk
(69°20'N)**

Glimpsing in at the European temperatures today. Where's the heatwave? Oh, it's gone and those same areas that had the record heat about two weeks ago below freezing already. This is August, it's supposed to be the hottest month of the year in the northern hemisphere.

Back to the newsfeed where I found the original story on snow in Georgia, they talked about abnormal snow in Iran, 1972. I thought that's really interesting what are they talking about.

Oh, 8 meters or 24 feet of snow in one single storm, that's how deep it got to bury those telephone poles.

For six days, during which there raged a snow storm, many villages were under a thick layer of snow which in some places reached up to **eight meters** – just imagine that!

When you have record snow stories like this in August, and I've done videos on record-setting early snowfall Hokkaido, August 17th.

❄️ Global cooling: Record-setting early snowfall covers the top of Hokkaido mountain in Japan

An area near the peak of Mount Kurodake in central Hokkaido is covered with the first snow of the season in the early morning of Aug. 17, the earliest snowfall recorded since 1974.

Mount Kurodake in the town of Kamikawa in the northernmost prefecture of Hokkaido had its first snow of the season on **Aug. 17, the earliest snowfall observed there since records began being kept in 1974.**

I need to look back at the sunspot count, I mean we're going into a Grand Solar Minimum, 1970s had brutally cold winters for both the northern and southern hemispheres. Extreme storms, almost all the records being broken are breaking the records from the 1970s that were set. Realize the 1970s was an extreme weather decade and here we are starting to repeat it, so I'm wondering based on what happened in Japan with the snows, cooler in Alaska, how much snow Iran is going to get, because if it repeats something like the 1970s, they're going to get blistering multi-feed snowstorms again 10, 15 feet, that's going to lock in a city.

When you see things like this water fall roaring behind homes in New York, this is an Atmospheric Compression Event and what to expect moving forward.

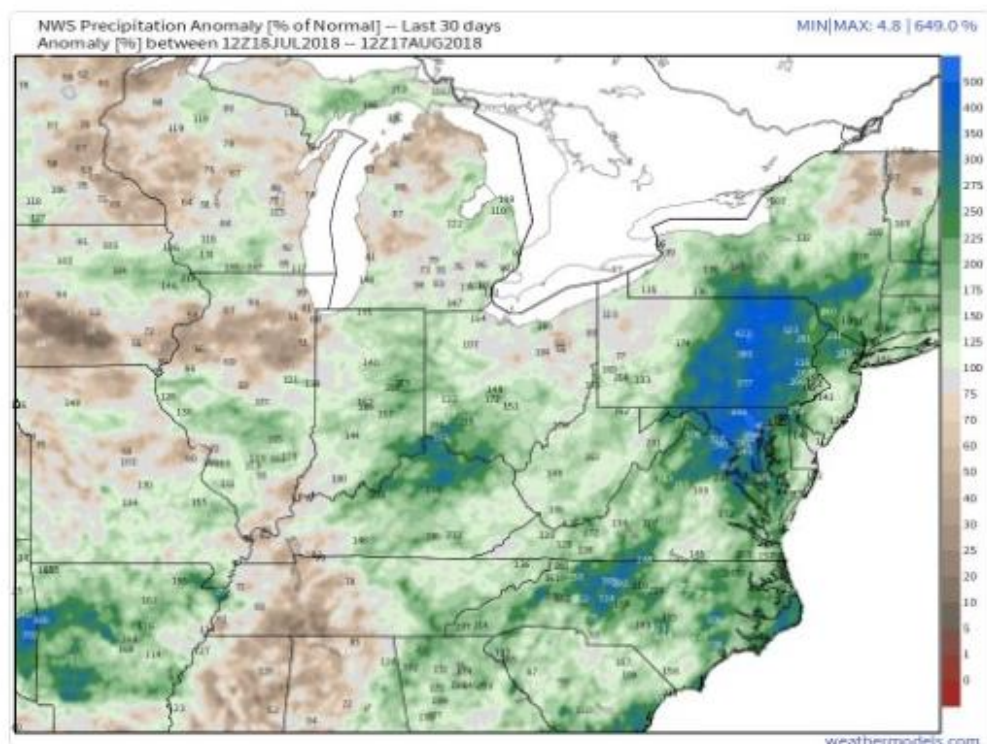

As I did one video before N.E USA had 5 times the amount of rain for the last month, and when you see streams turning into this, that's not normal that's not CO2, that is our Sun affecting our jet streams, shifting moisture patterns as it does with every single Grand Solar Minimum.

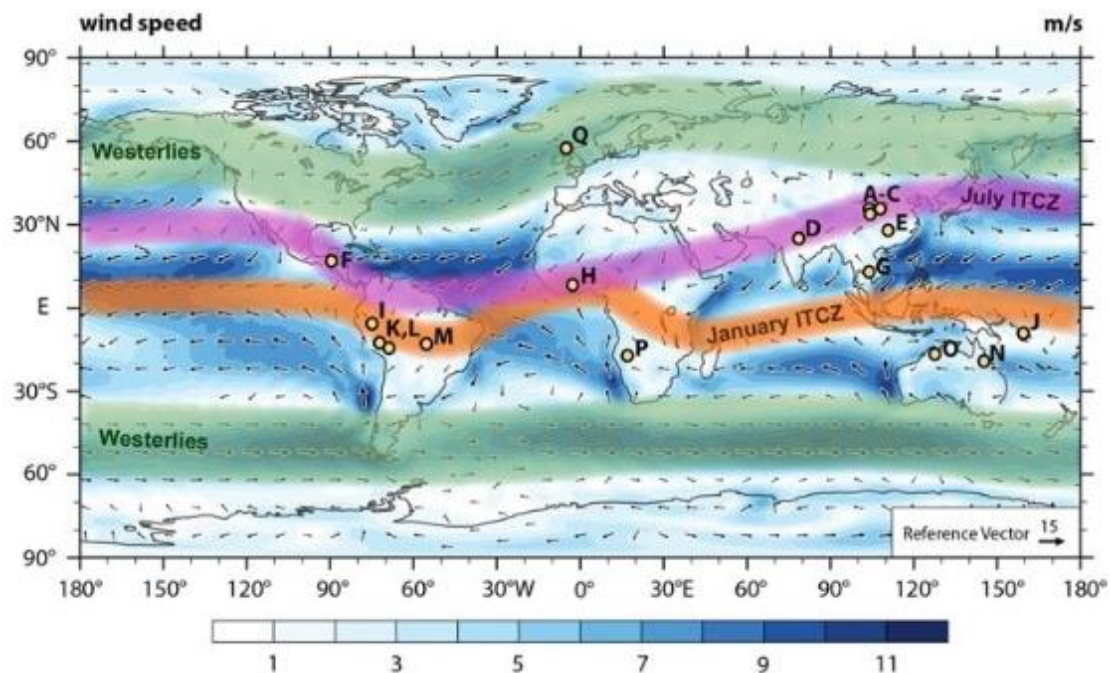

Ryan Maue | weathermodels.com @RyanMaue · 20h

Last 30-days of rainfall compared to "normal" observed over the past 30-years is amazing. 300-500%+ from the Carolinas thru D.C. into eastern Pennsylvania. Not the best way to keep the heat down.

I'll leave this is an example to show you how the Intertropical Convergence Zone (ITCZ) shifts during Grand Solar Minimums, that's a lot of moisture moving, this explains a lot of the floods and the droughts.

Thanks for reading, hope you got something out of the article. If you like this type of content, join me on my tri-weekly podcast Mini Ice Age Conversations, more in-depth analysis on these same trends in our climate and what you can expect for food pricing into 2021.
