Dismantle Capitalism to Save a Planet That is Not Warming

<u>— ADAPT 2030 Video Link —</u>

Starting off here Eric Holthaus," f you're wondering about what you can do about climate change" this is in response to the new IPCC report. The world's top scientists just gave rigorous backing to "systematically dismantle capitalism" as a key requirement to "maintaining civilization and a habitable planet".

If you are wondering what you can do about climate change:

The world's top scientists just gave rigorous backing to systematically dismantle capitalism as a key requirement to maintaining civilization and a habitable planet.

I mean, if you are looking for something to do.

Well, it looks like hurricane Michael started with your dismantling of capitalism, this is a look at one of the banks in Panama City Florida. The scare factor 10 is out because CO2 is making hurricanes more intense but that's just not true.

Jeff Gammons @StormVisuals · 7m Complete destruction to the northeastern side of this bank in Panama City, FL. #HurricaneMichael

Back to a sneak peek at the IPCC report, it talked about a reduction in "re-direction of 5 to 10 percent of annual capital revenues across the planet of any country", your income and your government expenditures into some black hole fund with no accountability to try to cool the planet. Somehow they're magically going to get up there and talk to the clouds and make them stop or do whatever they do, they're going to have a oneon-one with a jet stream.

Final Government Draft Chapter 4 IPCC SR1.5

Increasing evidence suggests that a climate-sensitive realignment of savings and expenditure towards low-emission, climate-resilient infrastructure and services requires an evolution of global and national financial systems. Estimates suggest that, in addition to climate-friendly allocation of public investments, a potential redirection of 5% to 10% of the annual capital revenues<sup>1</sup> is necessary {4.4.5, Table 1 in Box 4.8}. This could be facilitated by a change of incentives for private day-to-day expenditure and the redirection of savings from speculative and precautionary investments, towards long-term productive low-emission assets and services. This implies the mobilisation of institutional investors and mainstreaming of climate finance within financial and banking system regulation. Access by developing countries to low-risk and low-interest finance through multilateral and national development banks would have to be facilitated (medium evidence, high agreement). New forms of public-private partnerships may be needed with multilateral, sovereign and sub-sovereign guarantees to de-risk climate-friendly investments, support new business models for small-scale enterprises and help households with limited access to capital. Ultimately, the aim is to promote a portfolio shift towards long-term low-emission assets, that would help redirect capital away from potential stranded assets (medium evidence, medium agreement). {4.4.5}

This particular quote keeps getting pulled and pulled again, because they're so into socialism and into controlling your lives, to control the fictitious enemy out there.

Replying to @AkshatRathi

In the main report, there's a finding that says it "requires an evolution of global and national financial systems" including "a potential redirection of 5% to 10% of the annual capital revenues" i.e., the profit margin of basically every company.

In our current path the world will reach 1.5 C warming in as little as 12 years. Oh yeah, you told us that back in the 1990s almost 30 years ago, and we're still nowhere close to where we should be.

The world's top climate scientists are about to announce without radical coordination action, how many times have we heard this now 6, 10, 12 times through our lifetimes if you're 50 years old? We're going to be locked into warming at least 1.5 C.

The world's top climate scientists are about to announce that—without radical coordinated action—the world has locked in warming of at least 1.5°C. Over here to the University of Alabama Huntsville (UAH)satellite temperature data set, for the month of September it is down from August. Look at the global temperatures on the 30-year baseline we're 0.14, not even 2/10 of a degree above, here they are spotting off in the IPCC report about going up to 1.5 C, this is literally ten times less than what they're talking about.

We're entering into a Grand Solar Minimum and at the lows of the regular 11-year solar minimum, it's expected to cool anyway and they're saying it's going to run up a degree and a half in the next 12 years. That person whoever it is in the IPCC putting out statements that we are into runaway Global Warming is showing its a political agenda not scientific fact.

#### Globally, the coolest September in the last 10 years.

The Version 6.0 global average lower tropospheric temperature (LT) anomaly for September, 2018 was +0.14 deg. C, down a little from +0.19 deg. C in August:

Again we kept hearing "Oh, it's a final chance to save the planet, final chance to save the planet." I've linked below the article to The Daily Caller that gives you 12 different instances of when they've told us this since the early 1990s, it's the "final chance to save the planet".

It's our final chance to save the planet. Just like last time. If we miss this final chance, there will be another final chance in a little while. theguardian.com/environment/20...

Why the next three months are crucial for the future of the pla... Two forthcoming major climate talks offer governments an opportunity to respond to this year's extreme weather with decisive theguardian.com

Going back in history a little bit systematically dismantling capitalism. Oh, yeah, we tried that like several times but it never worked.

The world's top scientists just gave rigorous backing to systematically dismantle capitalism as a key requirement to maintaining civilization and a habitable planet.

I mean, if you are looking for something to do. https://t.co/e5I7EWnRSC

Dismantling capitalism. Brilliant. No one has ever done that.

Continuing on because we're in such dire straits of the planet warming which were not, there now talking about instituting a \$240 gasoline tax to fight global warming. The IPCC wants to start super high and it's going to scare you, and then the masses will ask that it only be raised by \$20. Okay please, please, not \$240, just \$20.

They're going to roll this in incrementally, so they're looking for gas tax is at least \$1.7 per gallon in addition to what you're paying, it's \$2.60 average across the United States. You're going to be looking at something over \$4 at today's range if they add this \$1.7 tax in there to stave off a fake problem. They're looking at the end of the century for a \$19 gas tax on the petrol.

### **BAILY CALLER**

A \$240 PER GALLON GAS TAX TO FIGHT GLOBAL WARMING? NEW UN REPORT SUGGESTS CARBON PRICING

In order to effectively keep future warming below 1.5 degrees Celsius, the IPCC says carbon taxes would need to range from \$135 to \$5,500 per ton in 2030, \$245 to \$13,000 per ton in 2050, \$420 to \$17,000 per ton in 2070 and \$690 to \$27,000 per ton in 2100.

That's equivalent to a gas tax as high as \$1.70 per gallon in 2030 to nearly \$19 per gallon at the end of the century. That's less onerous than limiting warming to 1.5 degrees Celsius, but still no walk in the park.

They also want to institute a" new CO2 tax" which means the consumption tax on everything you buy sell do communicate anything you do, I'm surprised they're not including breathing because you exhale 40,000 parts per million of CO2 when you breathe, but that's probably going to be in the future, they're going to try to tax your breath. For now they want an incremental global consumption tax at \$5,500 per ton on CO2. What's that going to do to our manufacturing.

### **BAILY CALLER**

A \$240 PER GALLON GAS TAX TO FIGHT GLOBAL WARMING? NEW UN REPORT SUGGESTS CARBON PRICING

- A new U.N. report suggests a \$240 per gallon gas tax equivalent is needed to fight global warming.
- The U.N. says a carbon tax would need to be as high as \$27,000 per ton in the year 2100.

For Americans, that's the same as a \$240 per gallon tax on gasoline in the year 2100, should such a recommendation be adopted. In 2030, the report says a carbon tax would need to be as high as \$5,500 — that's equivalent to a \$49 per gallon gas tax.

But all the while this is focused in America, they just turned a blind eye, horse blinders on for China's skyrocketing coal power. See how much coal China is using, but they're not squawking about taxing China, implementing all the radical taxes or leftist ideologies of communist dictatorship thinking. Oh wait, China's already like that, so they don't have to do much. Anyway they're trying to bring it over here into the U.S, but they never talk about the elephant in the room.

Right, capitalism is the problem.

Bringing these types of issues out will get you branded as a skeptic, repent it's almost like the Global Warming Church is back from the 1400's.

Thanks for reading, hope you got something out of the article. I go into much greater detail in my tri-weekly podcast Mini Ice Age Conversations because as these the Grand Solar Minimum changes intensify the corporate media is going to try to keep you distracted from the reset button for civilization.
