

Record Snow Las Vegas & Roofs Collapse Canada From Snow Load

A glimpse at GOES Continental U.S. as Winter Storm Petra pushing through the Eastern part of the United States.

Jet streams are in the wrong place yet again, causing upper atmospheric disturbance. That extreme cold off the west coast of Canada and further down into Washington, Oregon could explain the record snow that BC and Washington

State have received recently. Breaks in the jet streams we are seeing globally are caused by the weakening magnetosphere due to declining solar activity.

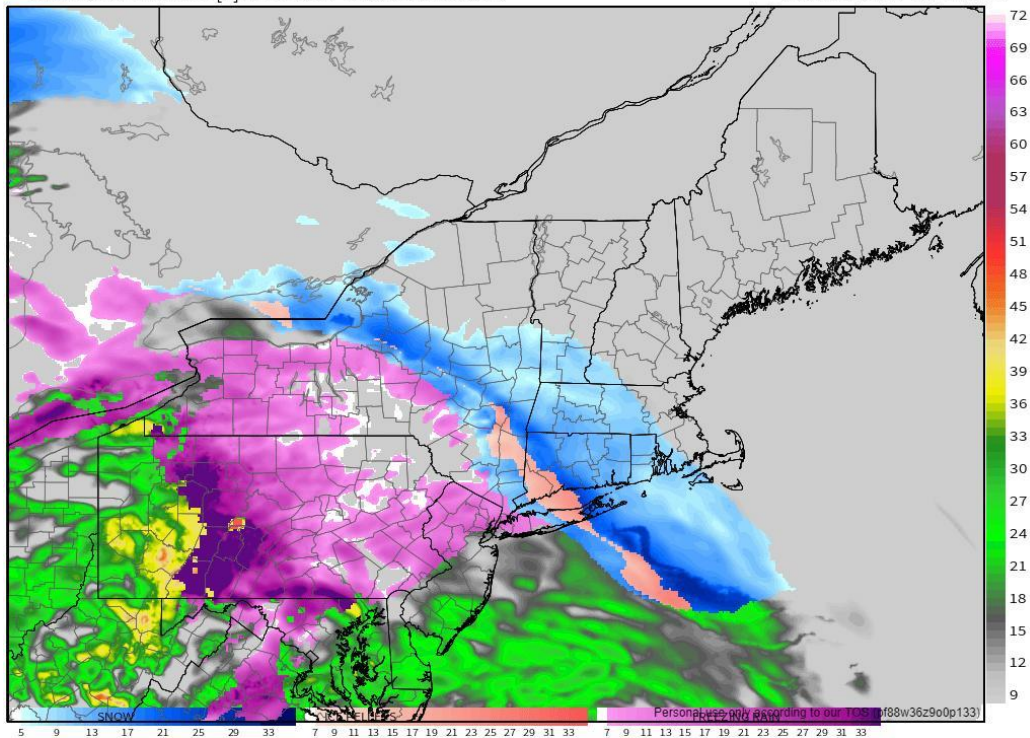

On Thursday, the jet stream has pulled south, allowing cold air to spill into the eastern prairies once again.

Winter Weather Alerts are issued by *weather.com*. that swept over an enormous area of the Lower 48, as well as parts of Canada.

Winter weather alerts are in effect for parts of many states in the Midwest and Northeast

Ryan Maue off of *weathermodels.com* has brought out this forecast as well. In the map, blue is the snow line preceding the front and the purple shows freezing rain. The darker the color is, the more intense the event is in that particular area, as we progress through the next 48 hours.

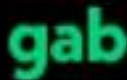

Meanwhile, those of you that have been following my channel, ADAPT 2030, for some time know that I've been going head-to-head and locking horns with the IPCC explaining my premise, as well as others, that solar activity is responsible for the changes in our weather patterns.

I've been putting this information about the mix-ups in our Jetstreams and climate that are occurring on the planet, 4 to 5 times a week, along with the podcast Mini Ice Age Conversations.

I want to express my gratitude to the administrators of GAB for noticing. When you visit the reformatted GAB site after it was taken down due to free speech issues, the front page shows accounts of some new users you can find; ADAPT 2030 is in the list there.

I present different explanations and causations for a lot of things that are happening on this planet. As for me, I'm looking at the Grand Solar Minimum to explain why our food prices are getting expensive and why there's so much social chaos going in almost every country. I feel that social chaos is a form of massive distraction, so you won't be looking at why our food prices are rising and from this point forward, crop yields are going to decrease. By 2028, there will not be enough food to feed this planet.

Some solar physicists have already started warning the government that there's a need to stockpile at least 4 years' worth of food right now, for the years beginning 2028 where there will be global food shortages due to lack of ability for us to grow grains in the regions we do now due to solar activity declines.

So if you're on the GAB platform, please subscribe to ADAPT 2030, but if you're not on GAB yet, I encourage you to sign up for an account, because this is truly one of the last bastions on the internet for free speech.

Moving on, record snow took place at fabulous Las Vegas. This is something that was not predicted during Global Warming forecasts.

Vegas broke the daily snowfall total for that date and was also the second latest date on record in the winter season where half an inch of snow, or more, had fallen. The last record was a six-tenths of an inch in 1987.

NWS Las Vegas @NWSVegas · 5h

Las Vegas official snowfall for Feb 20th is 0.5 inches. This **breaks a daily snowfall record for this date**

It is also the second latest date (winter season) where a half inch or more of snowfall was recorded. Record latest was 0.6" on Feb 25th, 1987

#vegasweather #VegasSnow

What's interesting with this winter storm warning is the city is expecting another 1 to 3 inches of snow. So literally, this will be 5 times the old record if it does come and reaches 3 inches of snow accumulation.

Feb 18, 2019

Las Vegas sees snow

This is the first accumulation of measurable snow in the valley in a decade.

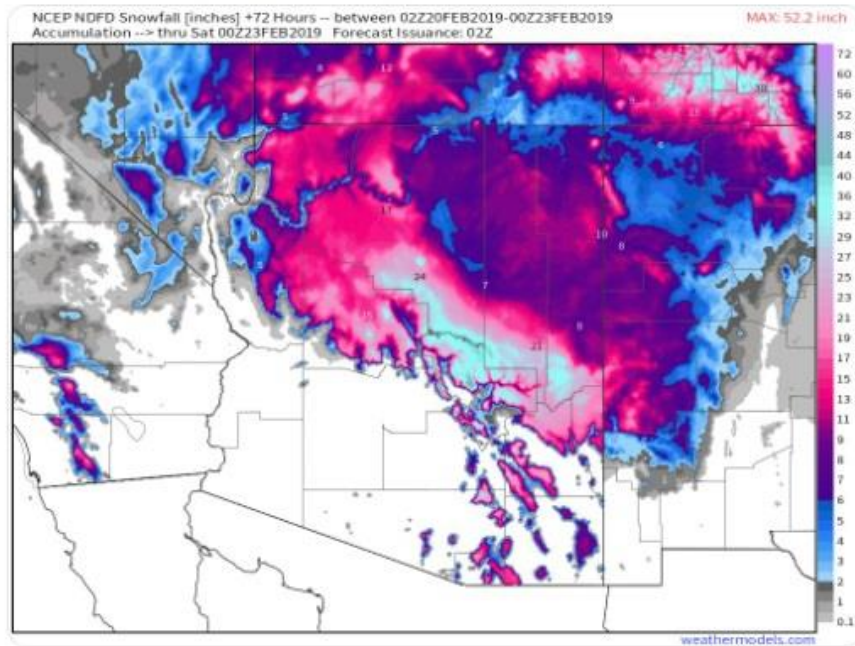

There's more snow in the forecast in addition to the inch or two already on the ground. **A winter storm warning is calling for another one to three inches.**

And if you take a look at the forecast from Ryan Maui at *weathermodels.com*, there's no snowfall in Phoenix but there is in Las Vegas. There is then a very good chance that they're going to break that all-time snow record by multiple times, not by just a little bit, but 3, 4, or 5 times the original record. These are the types of things that you would expect during the Grand Solar Minimum intensification.

Ryan Maue @RyanMaue · Feb 19

Most recent 72-hour forecast from NWS has over 50" of snowfall expected around Payson, Arizona. Whoa!
No snowfall in Phoenix ... sadly. But yes to Las Vegas

Saskatchewan, coldest February in 80 years.

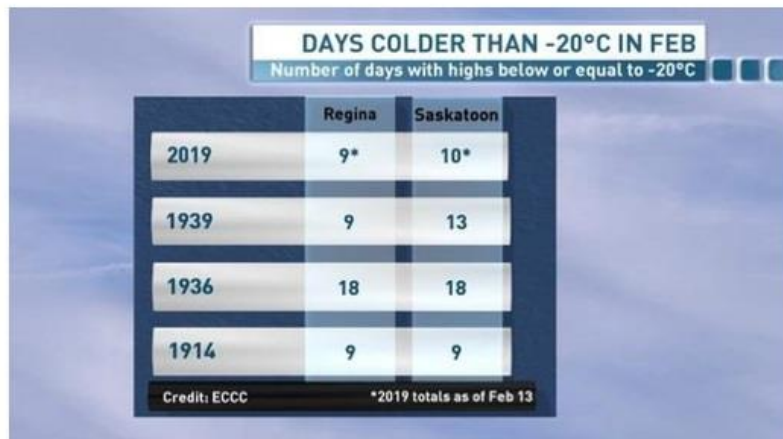

21 Feb 2019

Saskatchewan sees the coldest February in 80 years

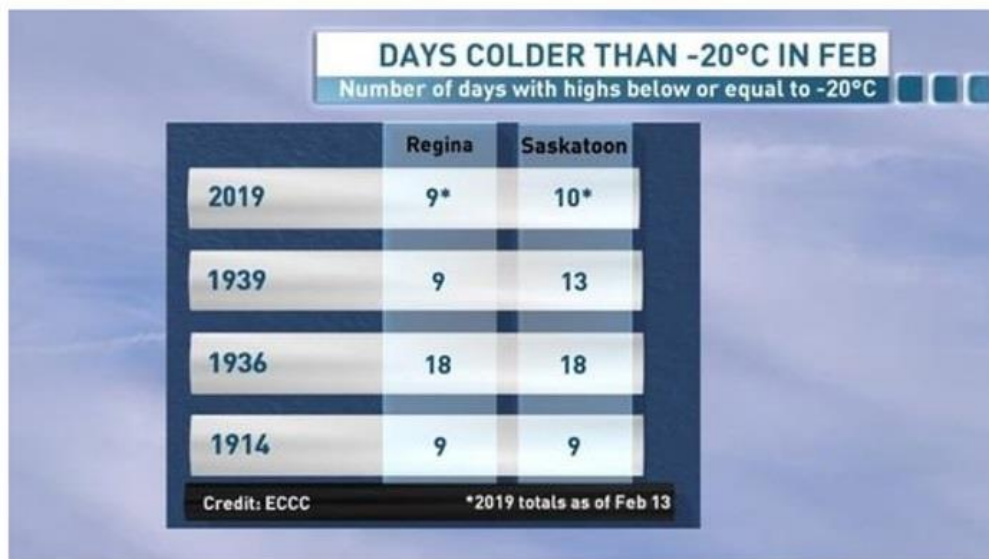

As of Wednesday, Regina had 9 days where the temperature had not warmed up past -20 C. Temperatures overnight have been brisk - in the minus 30s or even minus 40s - but there has not been much recovery in temperatures during the daytime.

Saskatoon has fared even worse, with 10 days with daily highs below -20 C. To put that in perspective, a normal year would have us seeing daily highs in the minus single digits and lows in the minus teens, so these conditions are 10 to 20 degrees below normal in many areas.

This kind of cold stretch has not been seen in 80 years

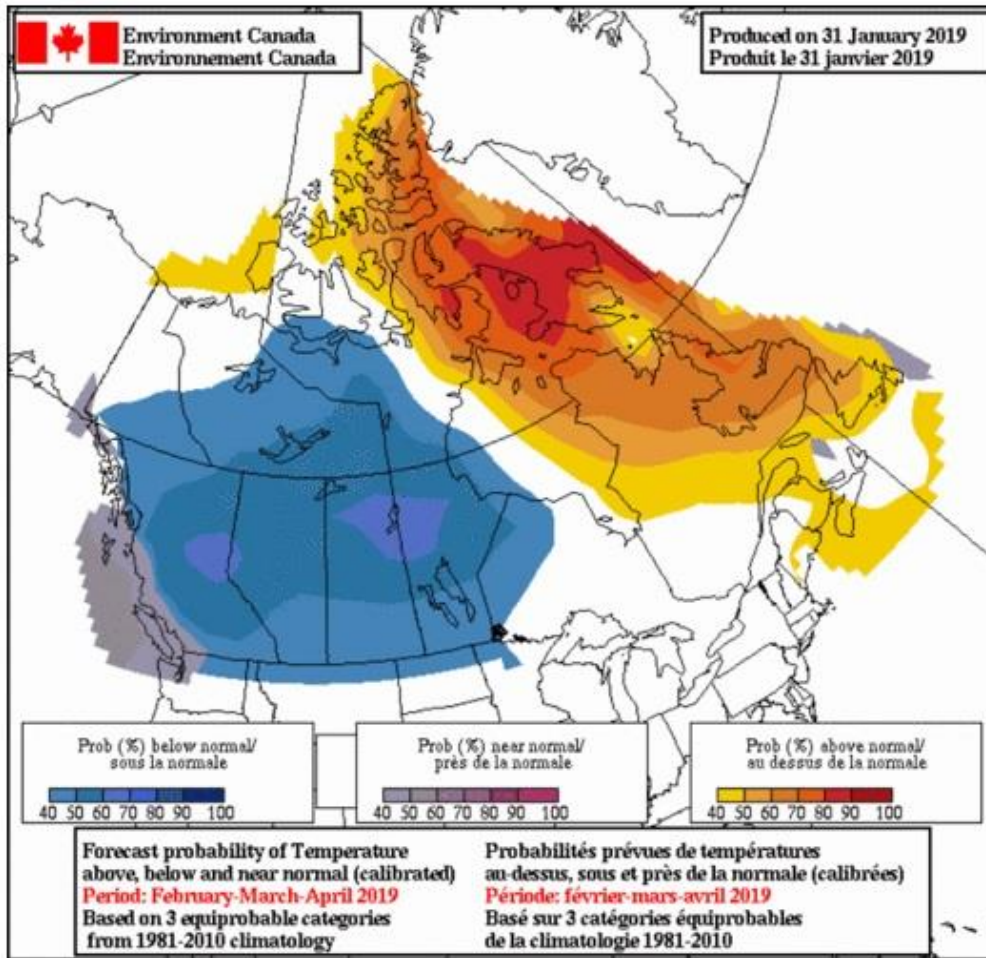

2019 is at the top of the chart and Environment Canada states: This kind of cold stretch in February was last seen in 1939. You have to take note that these totals have only gone through February 13th and it's been colder since then. This chart will then need to be updated at the end of the month.

© Environment and Climate Change Canada

This kind of cold stretch in February was last seen in Sask. in 1939.

And with Environment Canada staying on same track in the article, they put out a 3-month temperature forecast. They're showing warmer than average temperatures in the east around Newfoundland and in Baffin Island, the last seed point of a glaciation on our planet, while extreme below normal temperatures are out in the west. This brings us through March and April the start time for getting fields ready to plant.

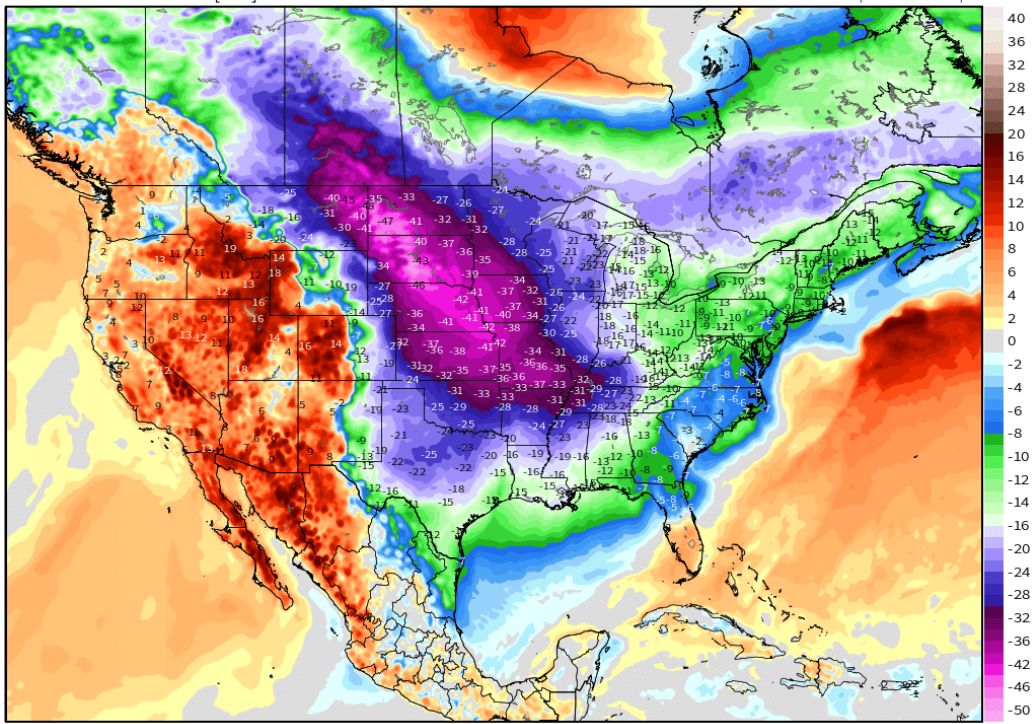

© Environment Canada

Weathermodels.com March 2nd forecast is showing a temperature of -47 degrees Fahrenheit below zero. This will be a super freeze 3.0, and you know what's interesting, it is centered right over the grain belts in the United States.

ECMWF 2-meter Temperature Anomaly [°F] | 1999-2018 MClimate
Init: 12Z20FEB2019 -- [240] hr --> Valid Sat 12Z02MAR2019

MIN|MAX -51.0° | 28.9°F

Continuing on to the record snowfall, Quebec experienced record snow that has caused roofs to collapse from heavy snow load.

Montreal broke accumulation records back to 1993 with an added bonus of collapsing roofs.

Then I came across this emergency alert put out by the Kenmore Mounties.

Emergency alert issued as dozens of crashes shut down Trans-Canada Highway in Alberta – CBC News

Published 10 hours ago on February 20, 2019

By admin

Treacherous driving conditions on Trans Canada near Dead Man's Flats

Canmore mounties have closed the Trans Canada highway west of Calgary as the driving conditions worsen to the point of being "impassible". Eight people have been transported to hospital as some 40 cars sit in the ditch near Dead Man's Flats.

Feb 20, 2019

Advertisement

Dozens of crashes shut down the Trans-Canada highway in Alberta, and that is really strange because Canadians are so used to driving in the snow. They're so used with these types of conditions and it made no sense why there were 40-car pile ups.

Remember also that in this area, apart from being so used to driving in this condition, they already have snow tires as well. This should have been a normal driving condition to them, but since this time it was so extreme, it caused these pile ups. Chris Anhorn shared this information with the CBC News. The signs are indeed all around us: The Grand Solar Minimum is amplifying.

Chris Anhorn shared this photo with CBC News showing emergency vehicles on scene near some of the crashes on the Trans-Canada Highway Wednesday afternoon. (Chris Anhorn)

Thanks for reading, I hope you got something out of the article. If you like more information like this, I produce the tri-weekly Mini Ice Age Conversations podcast, 30 minutes of an in depth analysis on the GSM you can take on the go.
