

Antarctic Sea Ice Gain Caused Global Cooling

“Past Ice Ages Apparently Happened Due to the Increased Antarctic Sea Ice.” Interesting article and note that previous increases in sea ice levels may have changed the circulation of the ocean, although the author doesn’t mention which ocean. With this being said, how does the IPCC explain what they said about carbon dioxide being able to contribute in such a change, even if it is only four one hundreds of one percent (0.04%) in our atmosphere? How can this ratio, four one hundreds of one percent, have the same effect in increasing Antarctic ice?

Great Lakes Ledger November 1, 2019

Past Ice Ages Apparently Happened Due to the Increased Antarctic Sea Ice

By using computer simulations, the research took a look at the past changes that happened during the glacial periods and found out that the **previous increases in the sea ice levels may have changed the circulation of the ocean.** This thing led to a reverse greenhouse effect because the carbon dioxide levels in the ocean also increased, and levels in the air decreased.

Or could it be something much more massive, like the oceans outgassing CO₂ or absorbing CO₂? Anyway, I find the second paragraph of this article, the most interesting: “This is the most normal explanation that there was a change in the way carbon was divided between the ocean and the atmosphere.” I think they are just guessing at this point, however. Also, I found it fascinating that they finally used “mini ice age” in this article. Is this predictive programming because this article just came out in November 1st?

Great Lakes Ledger November 1, 2019

Past Ice Ages Apparently Happened Due to the Increased Antarctic Sea Ice

The most normal explanation is that there was a change in the way carbon was divided between the ocean and the atmosphere. Again, they have no idea how or when.

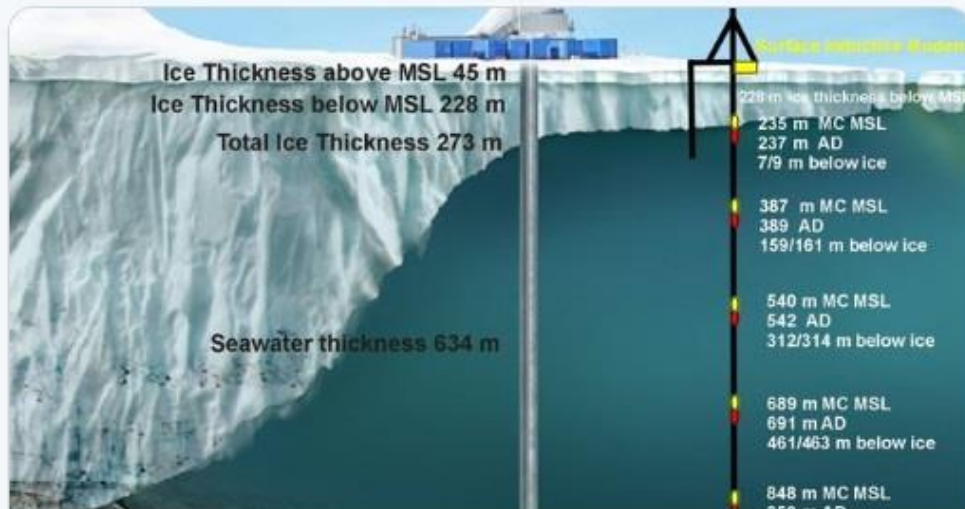

Scientists also believe that there was a **mini ice age**, which happened about 12,800 years ago. It looks like an asteroid impact changed the Northern Hemisphere, which was the reason behind the Younger Dryas climate event.

Additionally, this article from *Climatism (BELOW)* says, “Ross Ice Shelf freezing not melting: It blew our minds.” So, these previous articles are about the increasing Antarctic sea ice that can drive climate change, to possibly cool the planet.

Indeed, there is a report of increasing sea ice. The Southern Hemisphere sea ice area, for instance, is represented by the big orange arrow in the chart below. Global media outlets consistently told us that Antarctica was melting into *oblivion*, and that the sea levels were going to rise, yet as shown in the graph, 2014, 2013, and 2012 ranked the 1st, 2nd, and 3rd highest amount of sea ice extent, respectively.

This somehow missed our news feeds five years ago, but I want to bring it back to your attention, because of how stories are being buried that didn't pan out for the AGW agenda. Thankfully, we have the avenue that allows us to dust this one off and allow the information resurface.

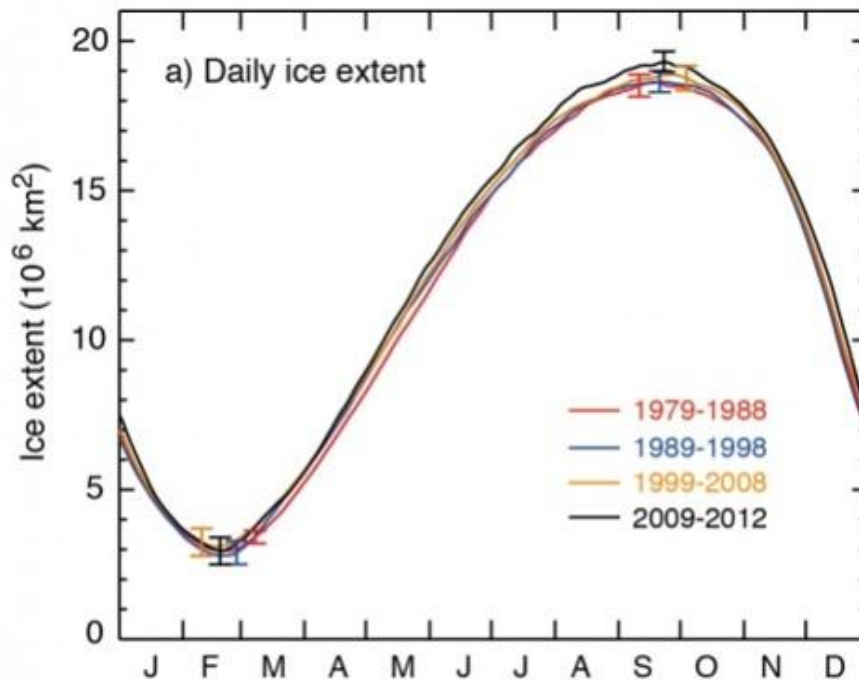

Southern Hemisphere Sea Ice Area

JAXA Antarctic Sea Ice Extent – 15% or Greater:

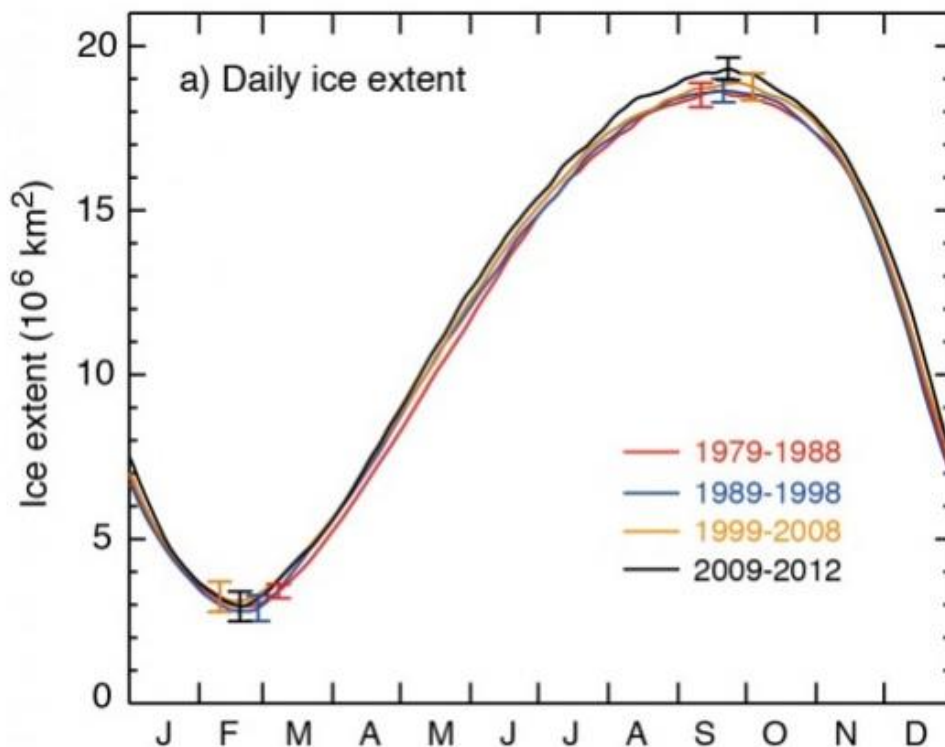

AntarcticGlaciers.org had also this article written in 2015 regarding increasing Antarctic sea ice.

Increasing Antarctic Sea Ice 26/02/2015

As shown, 2009-2012 we have high/low season bands and through today, measurements showed sea ice gains around Antarctica.

Now, where does that leave us? Is it more about framing “Climate Change” to keep the debate ongoing, so the U.N could say, “Give us all your money through a global carbon tax”? I think, we are going to need our money because our food prices will increase as agricultural struggles across the planet, this year, becomes more rampant through 2020 onward.

FRAMING CLIMATE CHANGE

In the meantime, were you aware of the wildly reported 11,000 scientists who signed the petition for the climate emergency?

It has now been found out that there is an enormous number of fake names on this petition. The signatory even included ‘Mickey Mouse’, ‘Harry Potter’, ‘Headmaster Albus Dumbledore, etc. These bunch of fake names had to be removed off the list from the *Alliance of World Scientists* declaration of climate emergency.

In fact, this has taken a full-on scrub effect, because not only few names have been removed, it has now reached hundreds. And due to increasing focus on this matter, people are back tracking every single signatory on this list, hence, magically, hundreds disappeared before they get caught red-handed fibbing the information.

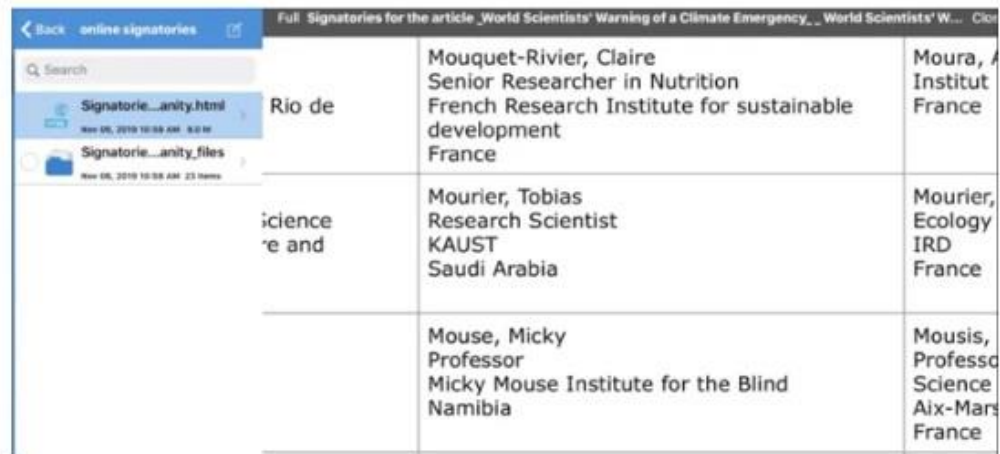

“11,000 scientists” climate emergency petition includes a bunch of fake names

Anthony Watts / 1 day ago November 7, 2019

Scientists' petition on climate crisis blocked over fake signatories

Dozens of signatories including Mickey Mouse and Harry Potter headmaster Albus Dumbledore from Hogwarts have been removed from an Alliance of World Scientists declaration of a “climate emergency”.

A statement issued by Oregon State University said “an administrative error unfortunately saw the inclusion of a small number of invalid names”.

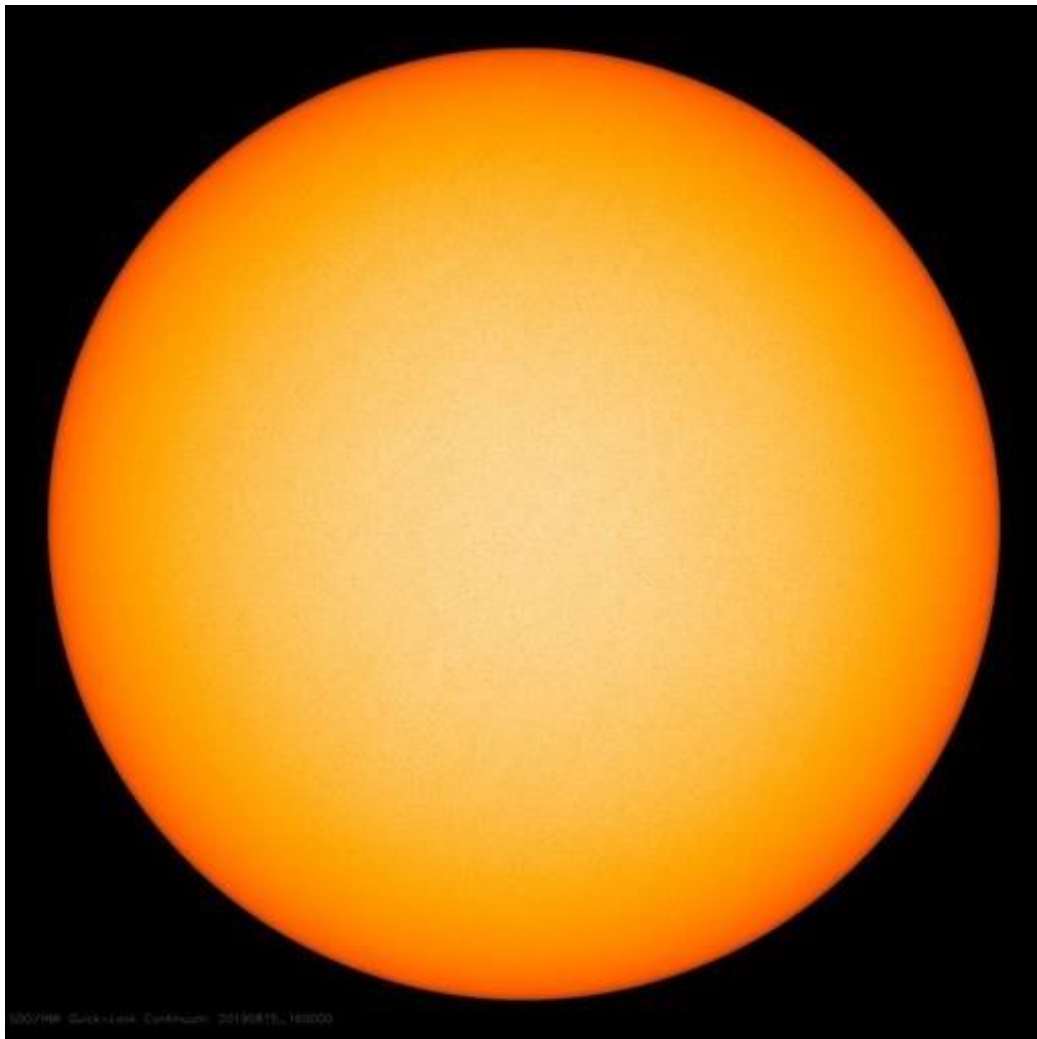

Rio de	Mouquet-Rivier, Claire Senior Researcher in Nutrition French Research Institute for sustainable development France	Moura, A Institut France
science re and	Mourier, Tobias Research Scientist KAUST Saudi Arabia	Mourier, Ecology IRD France
	Mouse, Micky Professor Micky Mouse Institute for the Blind Namibia	Mousis, Professo Science Aix-Mars France

Graphic accompanying the article, Professor Mike Mouse signs the petition declaring a “Climate Emergency”, as well as casts from Harry Potter. It is magic how much of an ‘emergency’ our current climate is.

**PROF MIKE MOUSE SIGNS PETITION
DECLARING A CLIMATE EMERGENCY**

If you look at 'real' science, particularly, astronomy, there are still few to no sunspots on our Sun at the supposed beginning of solar cycle 25. Our star is continuing into its ultra-low activity that is going to bring us back into the lowest solar activity in 200 years. How, do you think, will the corporate media spin the lowest solar activity in 200 years into cooling earth temperatures and crop losses? I guess, they are still going to try to blame you with CO₂, to make you pay a global tax. I want to see that unfold, you should too.

Because aerial photos of Midwest snow covered crop fields during the last week of October are also alarming. Do you think they can harvest in the snow? How much is that going to drive up our food prices? I am also wondering what will happen again in 2020 planting season with all forecasts out that it will be an extremely wet spring again, for the third year in a row.

Because of that information, I added a full canning and food storage section in my Amazon store. This will help you prepare by storing food that you can buy cheaply and pack yourself for long term food storage.

You will need food raising skills during the Grand Solar Minimum such as raising animals, long-term food storage, canning meats, fruits, vegetables and everything in between can be found on this reading list and packing items.

MIAC #244 After Global Food Production Drops Then What?
<https://adapt2030.libsyn.com/miac-244...>

Climate Revolution is a 'Must Read' for understanding our Sun driven climate as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times with practical preparations.
