

## The Lost Khmer City Found and the Vertical Fish Farms in Asia

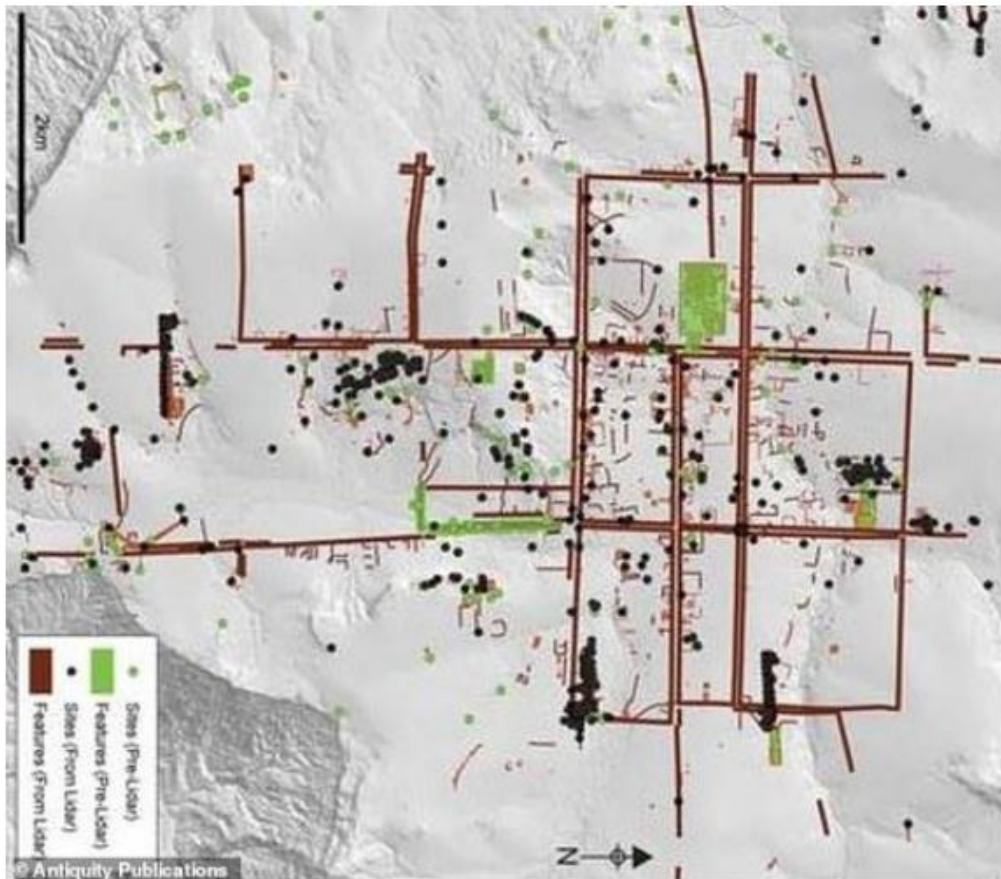

By now you have probably heard of the ancient metropolis Angkor Wat in Cambodia, surprise, another Khmer Empire temple complex was just found on the highlands plateau in Cambodia. A huge city, almost as large as Angkor Wat was just discovered. And I wonder, what other discoveries lie hidden beneath the forests of our world. So if you thought everything is known about everywhere on this entire planet, we don't.

## Ancient 'lost city' of Khmer Empire is found in Cambodia

Mahendraparvata - an eighth to ninth century capital of the empire - was believed to have existed in the Southeast Asian state in the Angkor period in Cambodia (Pictured: The newly discovered main axes of Mahendraparvata)

Mahendraparvata, the capital of the empire, is an interesting discovery you might want to learn more about. A lot of close-up images of what have been found under these Cambodian forest can be found around the web.

Mahendraparvata - an eighth to ninth century capital of the empire - was believed to have existed in the Southeast Asian state in the Angkor period in Cambodia (Pictured: The newly discovered main axes of Mahendraparvata)

Angkor Wat is in western Cambodia, while the new discovery on the plateau is far east on the map. Angkor Wat and Angkor Thom cover a few square miles, same as the new found empire ruins; so how did this stay hidden for so long. It seems like the locals knew about it, but the scientists didn't.

Links to the stories regarding the sudden discovery of these megalith foundation stones, can be found at the end of this article. Satellite imagery as well as what is being uncovered in the forest is being relayed in these news stories. Consider the land mines still in the area as they perform exploration, and excavation will be slowed due to safety risks.

## Ancient 'lost city' of Khmer Empire is found in Cambodia

Mahendraparyata was one of the first capitals in the Khmer Empire, which lasted from the 9th to 15th centuries AD, but much of what we know come from inscriptions recovered from other sites. Scientists theorized that the city was located on the Phnom Kulen plateau, about 48 kilometers (about 30 miles) north of Siem Reap, but it was difficult to find evidence. The plateau was remote, inaccessible, covered with vegetation, and potentially home to landmines installed by the Khmer Rouge regime in the 1970s.

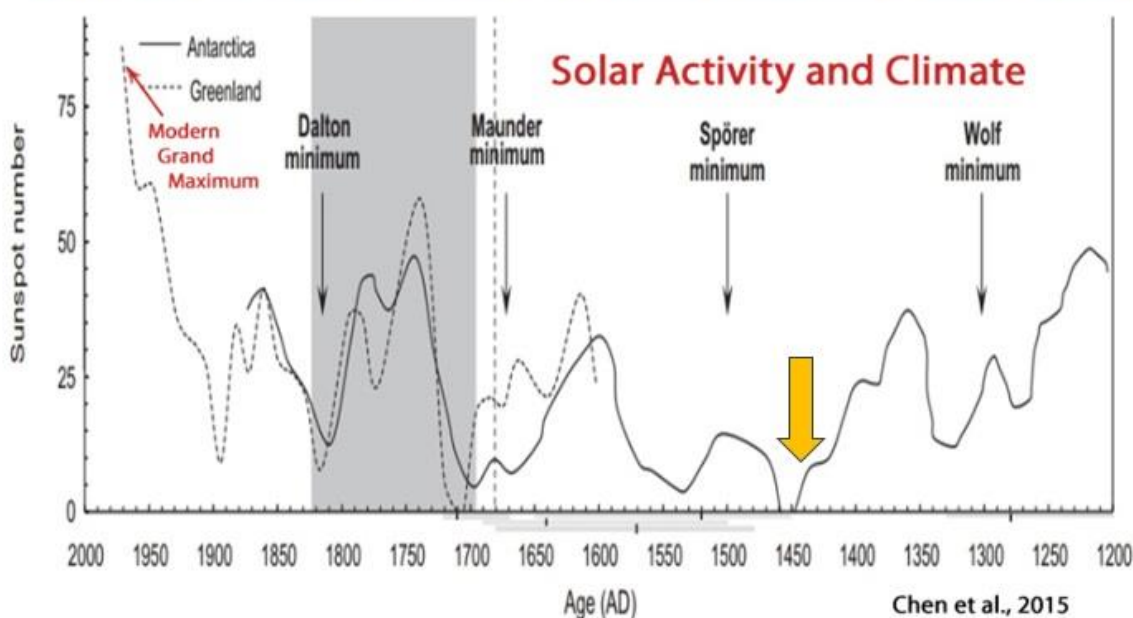

What caught my attention was the rise and fall of the Khmer Empire during a Grand Solar Minimum period around 800 AD as also the Tang Dynasty collapsed in China. So as a new dynasty emerged in China, the Khmer Empire was rising to its apex in power, but the final collapse of the Khmer Empire in 1431 was right at the depth of the Spörer Minimum.

This is why I keep saying that we can learn from the past, because our civilization is now heading into a Grand Solar Minimum. We need to think about the future of our modern society, and how are we going to grow food to feed the populous of the planet.

### WHAT WAS THE KHMER EMPIRE?

The Khmer empire was a powerful state in South East Asia, formed by people of the same name, lasting from **802 AD to 1431 AD**

At its peak, the empire covered much of what today is Cambodia, Thailand, Laos, and southern Vietnam.

Singapore is taking their food preparation to a new level, considering vertical fish farms. This consists of 8-floor tall buildings and a new initiative called 30-30. They want to produce internally 30% of their food in Singapore, without having to rely on imports. Singapore imports 99% of their needs, like many other countries, such as Taiwan, but at least they are now trying to break the dependence on imports.

I think Singapore sees the same thing that I do, a shifting climate means a shifting economic landscape, and we have to be more self-sufficient.

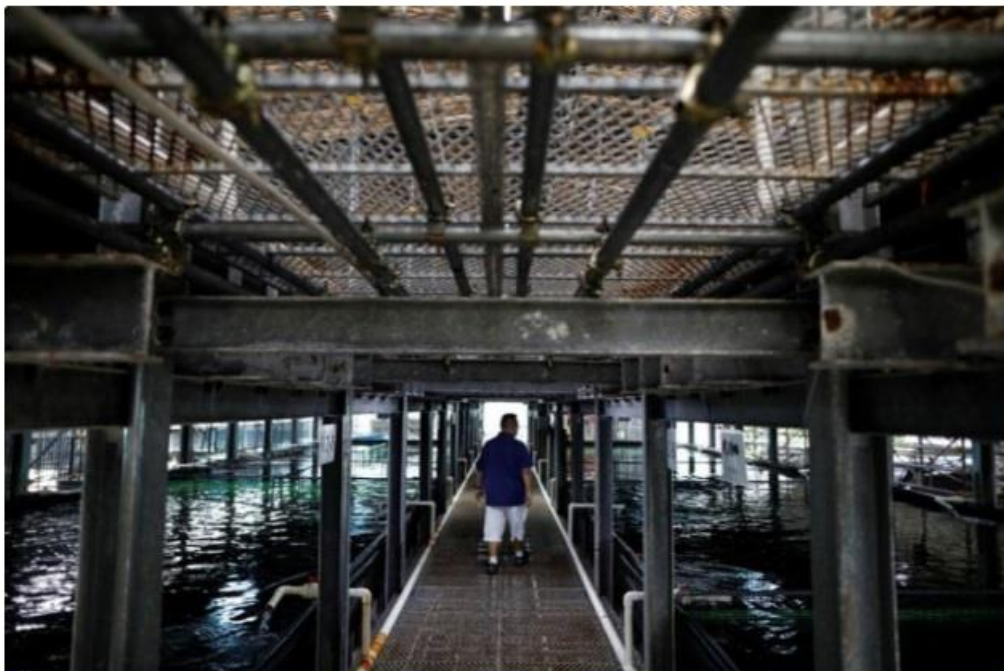

## From sky farms to lab-grown shrimp, Singapore eyes food future

Singapore produces about 10 per cent of its food but as climate change and population growth threatens global food supplies, it aims to raise that to 30 per cent by 2030 under a plan known as '30-by-30'.

Temasek is also providing funds to Apollo Aquaculture Group which is building a S\$70 million highly-automated, eight-storey fish farm. Apollo says the new farm will deliver more than a twenty-fold increase in its annual output of 110 tonnes of fish.

More importantly, if governments are thinking this way, you should too as an individual. How can you become more self-sufficient? Are you going to be work with Apollo Aquaculture?

Apollo Aquaculture Group CEO Eric Ng checks on his fish at his prototype vertical fish farm in Singapore.

Apollo Aquaculture does the same thing as the vertical farms, but instead of having plant based output trays, they are going to have stacks and rows of fish farms, to produce more protein in smaller spaces.

What about you? What kind of experiments can you run, or what kind of ingenious new systems and protocols can you come up with?

An employee pollinates strawberry plants at Sustenir Agriculture's indoor farm in Singapore.

Speaking of Taiwan, CO<sub>2</sub>, carbon neutral message is right in downtown Taipei. So, if you think climate hysteria is only in the West, you are mistaken. It is definitely spreading through Asia, but the CO<sub>2</sub> phobia does not take on the fervor that it would like in the UK, with Extinction Rebellion (XR).

This is because most of the world's manufacturing and shipping is in Asia, thus, they get the free pass, while the rest of us need to cut and curtail our lifestyles.

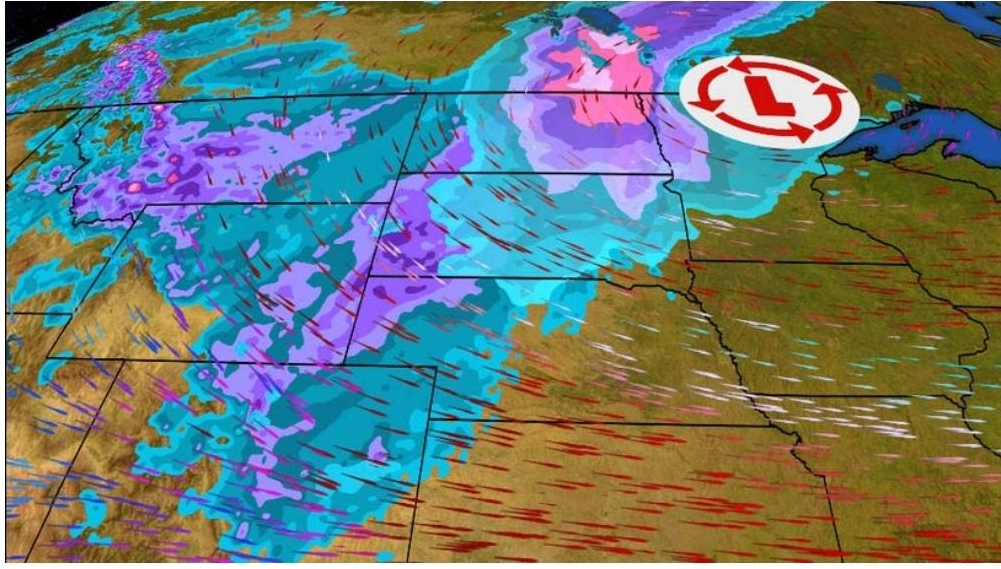

In another story, a major snowstorm blanketed crops across the United States and Canada. This is an all-time record blizzard cold that ceased the growing season for 2019.

# Major Snowstorm May Bring Blizzard Conditions and Set October Records in Parts of the Northern Plains

By weather.com meteorologists · 6 hours ago · weather.com

Leave it to Canadians with evaporating crop yields due to early record  
snows, to enjoy rollerblading in a blizzard of all things.

This die hard slushed right through cars, trucks and deep slush to cross a street. Cold weather or freezing temperatures does not seem to bother Canadians. They are going to survive just fine.

Back to indoor vertical agriculture, Brad Buttrick on *Hidden Harvest* has new all spectrum grow light, a unique grow bag with some amaranth microgreens in his basement indoor garden. There are lots of creative ways to grow food indoors.

Still looking for unusual weather events, this is a snapshot of rainbows and horizontal lightning in Texas.

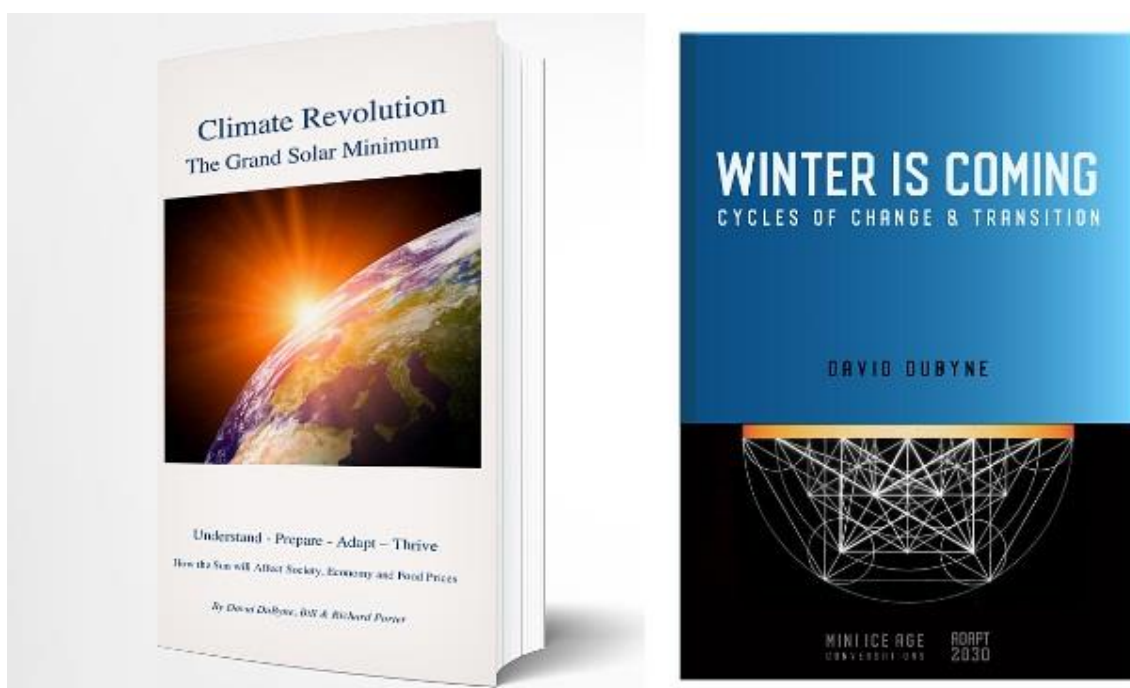

Thanks for reading, I hope you got something out of the article. If you like more content like this, I produce the tri-weekly Mini Ice Age Conversations podcast of a 30-minute in-depth analysis on the GSM you can take on the go through out your day.

Climate Revolution is a 'Must Read' for understanding our Sun driven climate as we progress deeper into the new Eddy Grand Solar Minimum. Weather extremes leading to Global food scarcity and high food prices are here now, and this book describes the expected changes, how to survive & thrive during future challenging times with practical preparations.
