

## China Begins To Isolate Itself, Mega Yachts Sink, Subliminal Food Price Signals

Beijing orders all government offices and public companies to replace foreign PCs and software. Now, since Chinese markets are not yet matured enough, they are still relying on foreign PCs and software in their offices. They are going to gouge, at least, \$150 billion, per year, out of revenue from U.S tech companies. It has always been like this with China, “Two birds, one stone.”

 ZeroHedge

**China Retaliates For Huawei: Beijing Orders All Government Offices And Public Companies To Replace Foreign PCs And Software**

Needless to say, if executed, such a drastic move by China would lead to massive lost revenue. How much? According to analysts at Jefferies, **US technology companies generate as much as \$150 billion a year in revenues from China, although much of that will come from private sector buyers.** Still, it's probably just a matter of time before Beijing expands the rule to all Chinese organizations, both public and private, especially since in China there is no such thing as purely private sector.

So, should we worry about the Grand Solar Minimum? Chinese are bothered by it at the moment, so should we too. Timelines for the switch of software will be implemented in 2020 and 2021. I have been reiterating the same thing about the 15% global awareness of the Grand Solar Minimum next year, and this is going to rattle markets, as people shift their consumer spending habits.

But by 2021, particularly towards the end of the year, 55% of the planet will have been very aware, especially when the harvest season comes and gargantuan shifts in the economy could no longer be denied. China knows about this already, same with most of the global leaders; and this is why unusual economic developments are happening globally.

### China Retaliates For Huawei: Beijing Orders All Government Offices And Public Companies To Replace Foreign PCs And Software

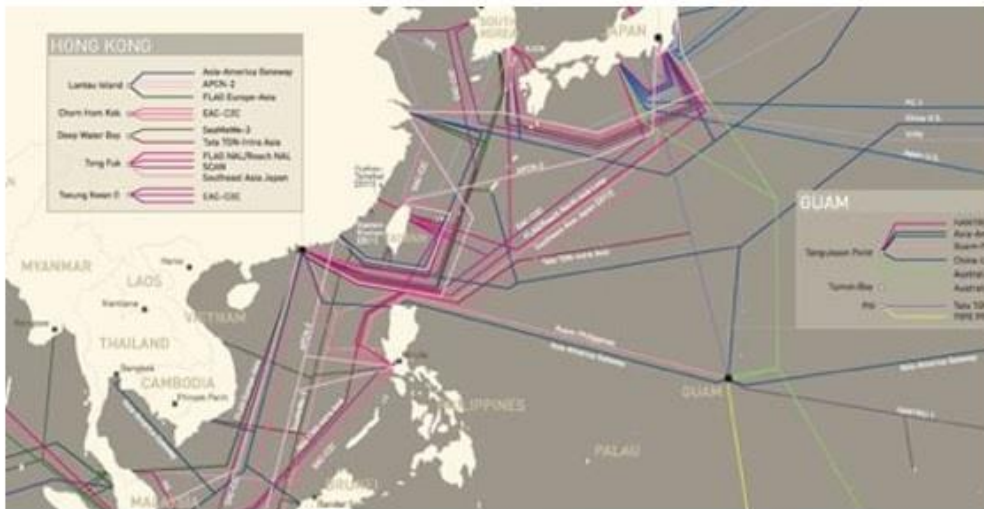

Quoting analysts at broker China Securities, the FT notes that some 20-30 million pieces of hardware will need to be swapped out as a result of the Chinese directive, with large scale replacement beginning next year. They added the substitutions would take place at a pace of 30 per cent in 2020, 50 per cent in 2021, and 20 per cent the year after, earning the policy the nickname "3-5-2".

But one thing they mentioned in the article is the cut of the supply lines, or the break in this supply chain. This should be the most worrisome thing in this article. China is starting to lock everything up in their country, because in every Grand Solar Minimum, China collapses.

So, if you were the Chinese government, would you continue to export things that you know would be needed in your own country, for your own people, in order to survive the Grand Solar Minimum?

## China Retaliates For Huawei: Beijing Orders All Government Offices And Public Companies To Replace Foreign PCs And Software

Additionally, the FT notes that the move is part of a broader campaign to increase China's reliance on home-made technologies, **and is likely to fuel concerns of "decoupling", with supply chains between the US and China being severed.** The big irony here is that it was IBM's sale of its PC group China's Lenovo in 2004 that allowed China to develop its own PC architecture and supply chain, and effectively reverse engineer US dominance in the PC sector.

I would absolutely not, and I would create an excuse for resources to remain in my homeland. Another full-on lock-up is also seen in Hong Kong, and then the on-going trade war on top of these events. Everybody is already circling their wagons to keep resources inside their own home nations, because governments know, they are going to need it.

If you follow the big money, “Where are all the billionaire’s superyachts? Slump signals a recession dead ahead.” This industry is truly the canary in the coal mine as to how the global economy is going to move in the future. Some kind of economic turn point seems to be the norm when “mega spending” slows down.

 ZeroHedge 12/05/2019

## Where Are All The Billionaires' Super-Yachts? Slump Signals Recession Dead-Ahead

Investors looking for signs of a recession might want to focus their attention on recreational boating and mega-yacht sales, **an industry that tends to decline ahead or during economic turning points.**

You have to realize, “mega-spending” on 100 or 200 million-dollar mega yachts. These ultra-wealthy play toy purchases seem to have been spooked by a real-world threat of contracting economy next year.

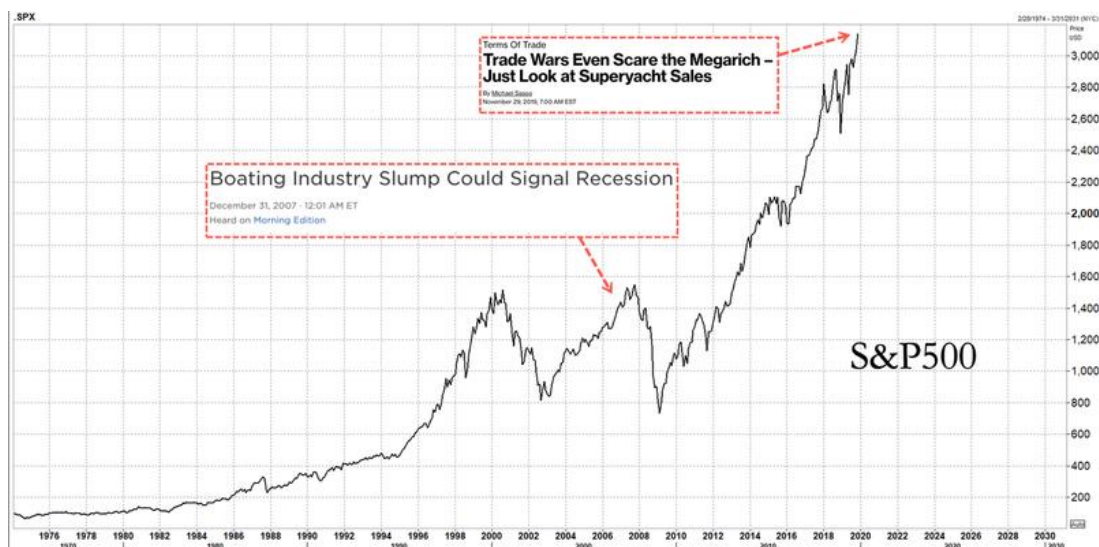

Again, 2020 is only a 15% awareness point on the planet, where people start shifting away from other expendables into necessities, in preparation for the Grand Solar Minimum.

# Where Are All The Billionaires' Super-Yachts? Slump Signals Recession Dead-Ahead

Superyacht dealers are also seeing a slowdown in sales because the ultra-wealthy are spooked by the real threat a global trade recession could arrive sometime next year. The ultra-wealthy are usually in the know of economic turning points, way ahead of the average person. They're sometimes the smartest money in the room, and make moves before the broader shift occurs. And perhaps, the rich, abandoning their love for yachts this year is also another sign that a domestic and global slowdown will persist into 2020.

Signs of certain awareness on this matter can be observed already. As we start marching into these next couple years with incredible rising food prices, there is going to be a lot of money positioning for this. As for the boating industry's slumps preceding recessions, it looks like we are on another one. But look at how much higher and how steep the plunge is this time compared to 2007 and 2008. To remind everyone again, there will be no stimulus that will pull us out of this one, instead hyperinflation.

Moreover, I found this quite interesting. This was sent to me for opinion, asking if this is a sign, subliminally, telling us that food prices are going to be ultra-extreme and one banana will worth \$120 thousand. Maybe it is going to be inflated money, who knows. But, this is such an obscure story where a guy at Art Basel jumps the barricade to tear the banana off the wall, and then ate it in front of everybody, as a performance artist.

 ZeroHedge 12/07/2019

## "See You After Jail Guys": Art World Stunned After Man Eats \$120,000 Banana Duct Taped To Wall

Then on Saturday, at around 1:45pm, the art world was shocked when a random man, allegedly a performance artist, [ate said duct-taped banana that sold earlier this week for \\$120,000.](#)

It gets more ridiculous; this piece of artwork is sold for \$120 thousand US dollars. I think this is a subliminal plant to show that your food prices are increasing. What do you think?

Recommendation of the week, visit this talk as Greg Allison explains the Voyager Spacecraft, how they exited through the Bowshock, at the very edge of our solar system, out into interstellar space. Greg's talk mentions the 40X increase in radiation, the signals that are sent from these, how low the wattages are, and how we have to use satellite dishes here on the planet to receive those messages. I highly recommend that you listen to this 25-minute talk, because you are not going to hear this anywhere else.

NASA Aerospace Engineer, Radiation Wall at Edge of Solar System, Future Space Travel, Greg Allison

How prepared are you for emergencies? These changes sweeping our planet should encourage you to be prepared in some way shape or form. Thanks for reading,

I hope you got something out of the article. If you like more content like this, I produce the tri-weekly Mini Ice Age Conversations podcast of a 30-minute in-depth analysis on the GSM you can take on-the-go through out your day.
