

The Blue Kachina of Hopi Prophecy, Maybe

Let me take you to C2017/K2, “The Record-Breaker” - farthest active inbound comet ever seen. This electrical connection from the Sun, which is the most distant comet ignition distance wise from the Sun and may be a possible “Blue Star Kachina” making it one of the most important comets coming through in the last 500 years. There has been very little coverage of this event since it was reported.

Because if it was this electrically active at that distance, it should have been followed month by month with updates as the intensity and glow increases. This comet would form a tail and eventually have the same color as the “Blue Star Kachina”.

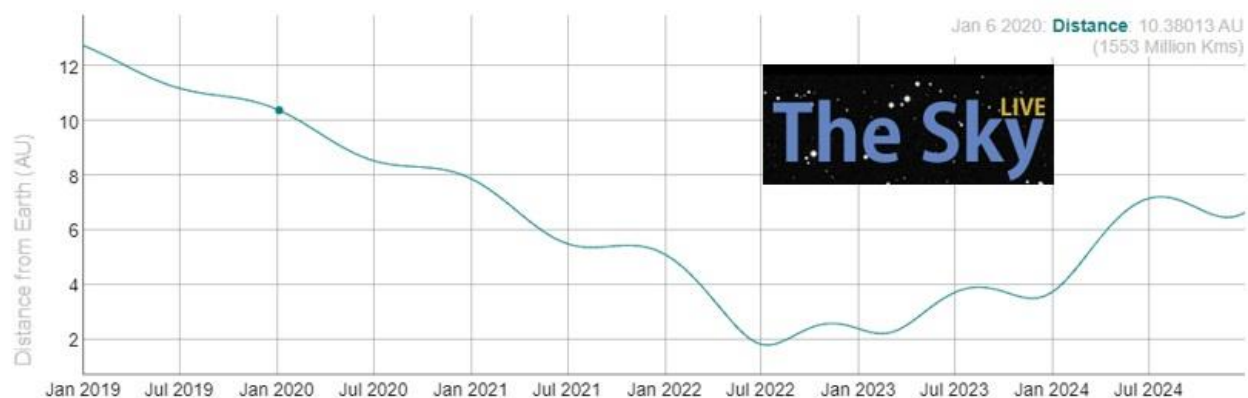

It is interesting timing that this comet would be wandering through our solar system right now, with all these incredible changes on our planet. This blue star seems to be a marker of time of change. I can't believe this is just a random happenstance.

Comet C/2017 K2

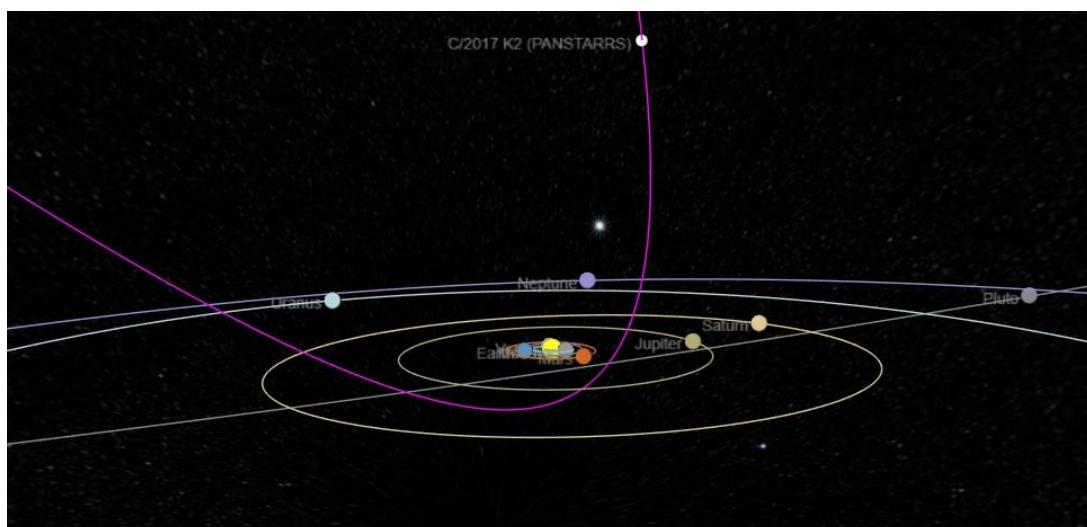

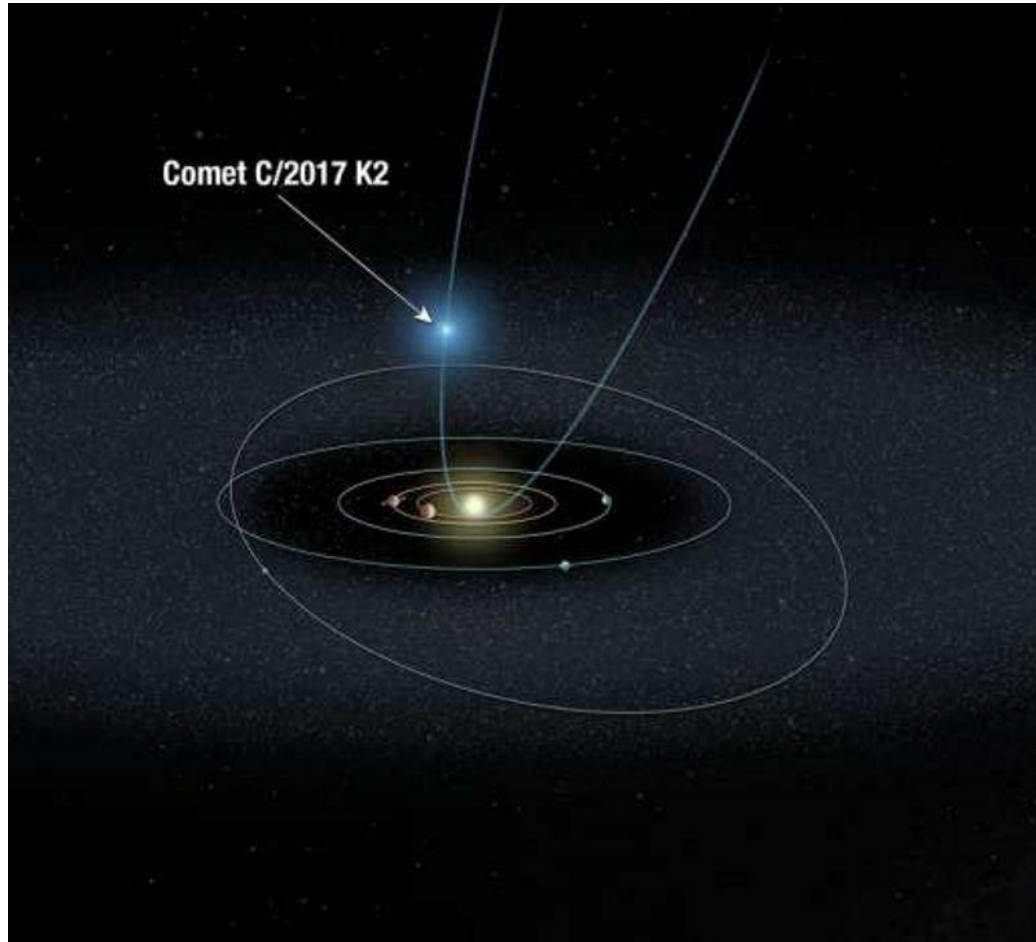

perihelion in 2022

The blue dot on the chart, January 2020, is where the comet is now. It is going to be reaching closest to our planet by July of 2022, so it will be intensifying in brightness each and every month as we move through the next year and a half. Let me warn you, the amount of change in the next year and a half is going to shock the societies on this planet.

The blue comet arrives in our skies while crops are being wiped out from these jumbled jet stream patterns and tumultuous happenings on our planet. This is a “sign in the skies” that is talked about from the Hopi prophecies; and this sign will rock our planet.

Thanks for reading, I hope you got something out of the article. If you like more content like this, I produce the tri-weekly Mini Ice Age Conversations podcast of a 30-minute in-depth analysis on the GSM you can take on the go through out your day.
